Contents

NO 1 JANUARY 1977

LETTERS TO THE EDITOR

Concentration dependence of acoustic phonons of NbD_x alloys
N Stump, A Magerl, G Alefeld and E Schedler L1
Electrons around a vacancy in simple metals — *G Mori* L7
Orbital effect on a band calculation — *S Wakoh* L15
The de Haas–van Alphen effect in terbium — *P G Mattocks and R C Young* L19
The residual resistivities of dilute iron-based alloys in the two-current model
J W F Dorleijn and A R Miedema L23
On the normal Hall effect in nickel alloys — *A R Miedema and J W F Dorleijn* L27
Isotropic spin glass behaviour and transverse magnetoresistance in **Au**Fe monocrystals
J E A Alderson, S P McAlister and C M Hurd L33
Ultraviolet photoemission from single crystals and the bandstructure of gold
P Heimann and H. Neddermeyer L37
An XPS investigation of the conduction band of Fe 8 at % Al — *T Collins and P T Andrews* L43

PAPERS

Vacancy-induced crystal dilation and its influence on formation volume and energy
J-A Schweitz and O Vingsbo 1
Volume change in some substitutional alloys using Morse potential function
S K Das, D Roy and S Sengupta 5
Single crystal elastic constants of neodymium from 4·2 to 300 K — *T J Lenkkeri and S B Palmer* 15
The 50 K transition in palladium hydrogen alloys: II. Specific heat and thermal relaxation
J K Jacobs and F Q Manchester 23
An energy dependent model pseudopotential — *C B So and S Wang* 35
The exact summation of asymptotic ion-pair potentials in simple metallic structures
M S Duesbery and R Taylor 47
Electronic structure of bulk and surface disordered alloys
M C Desjonquères and F Cyrot-Lackmann 61
Electronic structure of CsAu — *A Hasegawa and M Watabe* 75
Charge transfer in alloys — *D M Cragg and G C Fletcher* 87
Electronic structure and optical properties of thallium — *M A E A Ament and A R de Vroomen* 97
Energy bandstructure of zinc and cadmium — *Parsathi Sinha and S Chatterjee* 105
Comments on transition metal surface calculations — *D G Dempsey and L Kleinman* 113
Structural, electronic and magnetic properties of splat-quenched FeC_x alloys ($x \leqslant 0{\cdot}05$)
M C Cadeville, J M Friedt and C Lerner 123
Electron–impurity scattering in dilute alloys with lattice distortion: II. A model study — *A Lodder* 139
Thermoelectric power of homovalent noble metal alloys: II. Gold-based alloys
R H Dee and A M Guénault 153
First principles calculation of the electronic contribution to the thermal conductivity of potassium
C R Leavens 163
Exchange and Coulomb contributions to the CEF parameters in light rare earth cubic compounds
P Lethuillier, J Pierre and D K Ray 175
A novel low temperature rearrangement of atoms in the rare earth intermetallic compound $ErFe_3$
G J Bowden and R K Day 181
On the magnetic anomaly in $ErFe_3$ at 47K — *G J Bowden and R K Day* 191
Influence of ion implantation on CESR in aluminium — *A Stesmans, J van Meijel and J Witters* 199

NO 2 FEBRUARY 1977

LETTERS TO THE EDITOR

Coexistence of superconductivity and spin glass magnetic freezing
D Davidov, K Baberschke, J A Mydosh and G J Nieuwenhuys L47
A comment on the hyperfine field in ferromagnetic alloys *R A B Devine and Y Berthier* L53

PAPERS

An investigation of the atomic arrangements in some amorphous rare-earth–transition metal alloys
S S Nandra and P J Grundy 207
An electron statistical model for the cohesion of copper *J-Å Schweitz and O Vingsbo* 219
Secondary defects in quenched studies by Mössbauer spectroscopy
Ch Janot and H Georges-Gibert 231
Formation energy of vacancies in disordered transitional alloys
J Van der Rest, J Giner and F Gautier 243
Fast neutron radiation damage in aluminium studied by interstitial trapping at ^{57}Co Mössbauer atoms *W Mansel and G Vogl* 253
Longitudinal ultrasonic attenuation of single crystal erbium *P de V du Plessis and C Elbaum* 273
The density of states of a muffin-tin Hamiltonian *R L Jacobs and N Zaman* 283
TDPAC study of ^{111}Cd in $Ag_xCd_yAg_3Al_z$ and Ag_xZn_y *S A Lis and R A Naumann* 293
New plasmon satellite in Kβ x ray emission from metallic titanium and chromium
B G Gokhale, S Rai and S D Rai 299
Residual resistivities of 4d and 5d impurities in aluminium
T Toyoda, K Kume, H Ishikawa and Y Onodera 303
Microscopic fermi liquid theory of the temperature dependence of the susceptibility of normal paramagnetic metals *G Barnea* 315
The random anisotropy model for amorphous metallic alloys: Generalized molecular field calculations *R Harris and C Zobin* 337
Ultraviolet photoelectron spectroscopy of the valence bands of some Ag alloys
J A Nicholson, J D Riley, R C G Leckey, J Liesegang and J G Jenkin 351
Many-body effects in x ray photoemission from the noble metals *Y Yafet and G K Wertheim* 357

NO 3 MARCH 1977

LETTERS TO THE EDITOR

Zero to first sound transition in copper *A Loidl* L57
Influence of deformation on the low-temperature specific heat of a dilute α phase Pd–H alloy
U Mizutani, T B Massalski, J Bevk and R R Vandervoort L63
The preasymptotic form of the RKKY interaction in Heusler alloys *M I Darby* L69
Hyperfine interactions and structural disorder of $Fe_3Si_{1-x}Al_x$ alloys
V Niculescu, K Raj, T Burch and J I Budnick L73
On the soft x ray emission from Fe-Al alloys
C M Sayers, N H March, L M Watson and D J Fabian L77
Double ionization satellites in x ray excited L Auger spectra of solid Mg *J C Fuggle* L81

PAPERS

Higher-order partial structure factors for multicomponent systems
M Silbert, P Gray and S M Johnson 367
Interaction between metallic surfaces *R M Nieminen* 375
Parametrization of transition metal bandstructure via Hubbard's scheme *B Vasvári* 385
Magnetic properties of amorphous metallic alloys containing rare earth impurities
A K Bhattacharjee, R Jullien and M J Zuckermann 393
One-dimensional Hubbard model with nearest and second-nearest-neighbour hopping in the Hartree–Fock approximation *E Marsch, W-H Steeb and D Grensing* 401

Effects of temperature on the order-dependent electrical resistivity — *P L Rossiter* 407
Resistivity of liquid transition metals and their alloys using the t matrix — *K Hirata, Y Waseda, A Jain and R Srivastava* 419
Phonon absorption and pair breaking in superconductors at 35 GHz — *B G M Helme, P A Hilton, D J Meredith and J K Wigmore* 427
Dipolar anisotropy and the critical behaviour of spin glasses in small AC fields — *F A de Rozario and D A Smith* 439
A resonance study of the paramagnetic behaviour of Fe in Pd — *R A B Devine* 461
Anisotropy of paramagnetostriction of metals with HCP structure — *Y Takahashi and M Shimizu* 471
The distribution of magnetic moment in nickel alloys — *T J Hicks* 481
Charge and spin density in chromium–aluminium solid solutions — *M M R Costa and P J Brown* 493
Experimental evidence of a screening charge anisotropy around several normal impurities in aluminium — *M Minier and S Ho Dung* 503
Quadrupolar nuclear resonance investigation of the screening charge around 3d impurities in aluminium — *C Berthier and M Minier* 515
NMR study of magnetic transition in the $Cu_{1-x}Ni_x$ system — *D Aliaga Guerra and P Panissod* 521
Magnetic hyperfine fields at Au and Sb sites in the Heusler alloy AuMnSb — *W Leiper, J D Rush, M F Thomas, C E Johnson, F W D Woodhams, C Blaauw and G R MacKay* 533
XPS d bands and core levels of Pt–Ni alloys — *N J Shevchik and D Bloch* 543

NO 4 APRIL 1977

LETTERS TO THE EDITOR

On the charge-ordered solution of the Hubbard model — *F Brouers* L87
Positrons around vacancies in Al — *G Mori* L89
Dislocation electrical resistivity and resonance scattering — *R A Brown* L95
The formation of the magnetic moment of Co atom in pseudobinary alloys $CoTi_{1-x}Al_x$ in relation to a Heusler alloy Co_2TiAl — *K Endo, I An and A Shinogi* L99
Electronic states of Mn, Fe, Co, Ni and Cu impurities in aluminium — *P Steiner, H Höchst and S Hüfner* L105
First-order phase transition in superconducting sandwiches — *N Rivier and A A Babaei Brojeny* L111

PAPERS

Phonon–phonon scattering relaxation times for potassium — *M Kaveh* 551
Liquid–vapour transition in fluid metals: Application to sodium at low pressures — *P Minchen, M Watabe and W H Young* 563
Investigation of the anomalous temperature dependence of the self-diffusion constant of hydrogen in niobium by quasielastic neutron scattering — *D Richter, B Alefeld, A Heidemann and N Wakabayashi* 569
Neutron radiographic measurement of the diffusion of H in β-Ti, V, Nb and Ta — *A Zeilinger and W A Pochman* 575
The electronic structure of dilute transitional impurities in simple metals — *P V Smith* 585
Electronic structure of intermetallic compounds with CsCl structure — *D Seipler, B Bremicker, U Goebel, H Happel, H E Hoenig and B Perrin* 599
Theory of energy bands and related properties of 4d transition metals: I. Band parameters and their volume dependence — *D G Pettifor* 613
Bandstructure of thallium by the LMTO method — *P M Holtham, J P Jan and H L Skriver* 635
Structural aspects of energy in binary alloys — *V K Ratti and A B Bhatia* 647
Study of the audio-frequency magnetic field penetration in cadmium using the radio-frequency size effect — *W M MacInnes, B Collet, P A Probst and R Huguenin* 655
High-temperature deviation from Matthiessen's rule in InCd alloys — *R Fogelholm and O Rapp* 667
The true low-field Hall coefficient of high-purity silver and silver containing low-density defects at low temperatures — *R D Barnard* 673
The hyperfine field of dilute scandium in ferromagnetic gadolinium — *W D Brewer* 693
ESR of non S state ions in metallic Van Vleck pnictides — *R Levin, D Davidov, C Rettori, J Suassuna and D Shatiel* 703

Nuclear quadrupolar relaxation of Sb in liquid In–Sb alloys
M von Hartrott, K Nishiyama, J Rossbach, E Weihreter and D Quitmann 713
A study of Sn and Fe site hyperfine fields in ferromagnetic metals, including the Rh-based Heusler alloys *C C M Campbell, T Birchall and J C Suits* 727
X ray chemical shifts and atomic charges *P R Sarode and A R Chetal* 745

NO 5 MAY 1977

LETTERS TO THE EDITOR

Experimental evidence for concentration fluctuations in liquid sodium–caesium alloys
M J Huijben, T Lee, W Reimert and W Van der Lugt L119
On the problem of displacement threshold determination in irradiated metals: Subthreshold effects and recovery spectrum *P Vajda, M Biget, A Lucasson and P Lucasson* L123
On the present understanding of the bulk modulus anomaly of invar alloys in the itinerant electron model of ferromagnetism *G Hausch* L127
Electronic states of Pd–H alloys from de Haas–van Alphen measurements
R Griessen, W J Venema, J K Jacobs, F D Manchester and Y de Ribaupierre L133
Low-field susceptibilities of rare earth spin glass alloys: The role of single-ion anisotropy
B V B Sarkissian L139
XPS valence bands of La, Ce and Gd and their aluminium alloys
P Steiner, H Höchst and S Hüfner L145

PAPERS

Anharmonicity and the Debye–Waller factors in BCC metals *V B Singh and M P Hemkar* 753
Dynamical study of the Grüneisen parameters in FCC metals *V P Singh and M P Hemkar* 761
On the angular force models of de Launay and CGW *J C Upadhyaya* 769
A search for anomalous phonons in potassium *G Dolling and J Meyer* 775
An interpolation scheme for the BCC transition metals *S K Baker and P V Smith* 781
The energy of interstitial impurities in transition metals: H in Pd *C A Sholl and P V Smith* 789
Electron density of states of interstitial impurities in transition metals: H in Pd
C A Sholl and P V Smith 799
On the temperature dependence of positron trapping in deformed copper
P Rice-Evans and Tin Hlaing 821
Low-temperature resistivity of ferromagnetic metals with domain structure *G G Cabrera* 827
Magnetic breakdown in aluminium *W Kesternich and C Papastaikoudis* 837
Spin wave excitations in $Pd_{0.75}Ni_{0.25}$ *A J Smith and T M Holden* 849
Exchange interactions in dilute CrFe and CrCo alloys
F T Hedgcock, J P Strom-Olsen and D F Wilford 855
Calculation of the neutron scattering law of liquid aluminium
E Michler, H Hahn and P Schofield 869
On the effect of vacancy migration upon the annihilation of a trapped positron in metals
S W Tam and R W Siegel 877†
Corrigendum *R Prasad, S Auluck and S Joshi* 885†

NO 6 JUNE 1977

LETTERS TO THE EDITOR

The structure of liquid Ce–Ni alloys *Y Waseda and S Tamaki* L151
The 'golden rule' for dislocation scattering *R A Brown* L155
The lattice thermal conductivity of aluminium at low temperatures
T Amundsen, O Furuseth and R P Sovik L159
Magnetic measurements on amorphous FeSi alloys
G Marchal, Ph Mangin, M Piecuch, Chr Janot and J Hubsch L165

† Owing to a pagination error, references to papers whose page numbers are marked with a dagger should include the issue number in addition to volume and page numbers.

PAPERS

On the energetics of the γ–α phase transition in cerium metal: Determination of the atomic excitation $fds^2 \rightarrow d^2s^2$ *B Johansson* 877†

Electronic structure of metals: III. Properties of the lattice and of electron transport *C B So, Y Kuroda, K Takegahara and S Wang* 885†

An exact Green function treatment for dilute impurities in transitional and noble metal hosts *C A Sholl and P V Smith* 901

The effect of nonorthogonality in the density of states of some metallic disordered systems *M Weissmann and N V Cohan* 913

Occurrence of the sigma phase computed from a cluster model *M Brauwers* 921

De Haas–van Alphen effect and the cut-off at small scattering angles *B R Watts* 929

Dingle temperature plots in dislocated metals: I *B R Watts* 939

Bandstructure and Fermi surface of Cu_2Sb by the LMTO method *J-P Jan and H L Skriver* 957

Anisotropic temperature dependence of the Hall effect in monocrystalline copper *C M Hurd and S P McAlister* 969

Phase transitions in ytterbium under pressure *T G Ramsesh, V Shubha and S Ramaseshan* 981

Theoretical analysis of (100) and (111) faces of copper *C Tejedor* 991

Interface energy of two free-electron-like metals *J P Muscat and G Allan* 999

Theory of energy bands and related properties of 4d-transition metals: II. The electron–phonon matrix element, superconductivity and ion core enhancement *D G Pettifor* 1009

Grüneisen parameters, electron–phonon enhancement and superconductivity for Pd–H alloys *T F Smith and G K White* 1029

Magnetic structures in the rare earth metals calculated using a simple non-spherical Fermi surface model *J A G Temple, W M Fairbairn and G R Pickett* 1039

Local environment and magnetic properties in transitional binary alloys: III *J van der Rest* 1051

Magnetocrystalline anisotropy in RCo_2 compounds: A Mössbauer study *G Dublon and U Atzomony* 1069

Magnetic properties and structures of some ordered $(FeMn)_3Si$ alloys *S Yoon and J G Booth* 1079

The paramagnetic resonance of Gd in Laves phase di-aluminide compounds *E P Chock, R A B Devine, S A Dodds, R Orbach and L Tippie* 1097

Determination of covalent electrons from x ray chemical shifts *P R Sarode and A R Chetal* 1103

NO 7 JULY 1977

LETTERS TO THE EDITOR

Comparison of statistical and Lindgren conduction-core exchange approximations in *a priori* pseudopotential calculations for the lattice dynamics of metals *R S Day, F Sun, P H Cutler and Walter F King III* L169

Deviation from Matthiesen's rule at high temperatures: Ag in Al *Y Fujita, Y Fukai and K Watanabe* L175

Resistivity measurements on the intermetallic compound β'-$Ni_{48}Al_{52}$ with 3d transition metal impurities *Y Ochiai and J O Brittain* L179

Stoner theory support for the two-state hypothesis for γ iron *D M Roy and D G Pettifor* L183

Effect of finite core size on the RKKY interaction *J Smit* L189

The effect of a finite ionic spin distribution on the RKKY interaction *M I Darby* L191

The low-temperature electrical resistivity of bismuth *C A Kukkonen and K F Sohn* L193

A note on the hexagonal anisotropy of the fan phase in dysprosium *P B Fynbo* L199

Spin wave spectrum in ordered Pd_3Fe alloy *H Yamada and M Shimizu* L203

Influence of atomic ordering on the spin waves in $Ni_{0.75}Fe_{0.25}$ alloy *K Mikke, J Jankowska, Z Ostek and A Modrzejewski* L211

EXAFS of Cu obtained with a conventional x ray source *J A del Cueto and N J Shevchik* L215

PAPERS

An experimental study of dia- and paraelastic effects in e^--irradiated copper *L E Rehn and K-H Robrock* 1107

† Owing to a pagination error, references to papers whose page numbers are marked with a dagger should include the issue number in addition to volume and page numbers.

Energy of cohesion in transition metals — *F Kajzar and J Mizia* 1115
Single and multiple interstitials in FCC metals — *H R Schober* 1127
Kohn anomaly in the $1T_2$ phase of TaS_2
K R A Ziebeck, B Dorner, W G Stirling and R Schöllhorn 1139
Structural changes associated with antiferromagnetic ordering in Mn-rich Mn–Ni alloys
U Hocke and H Warlimont 1145
Correlation effects in the cohesive properties of the transition metals — *C M Sayers* 1157
The resonant model potential: II. Total energy: Theory and application to copper, silver, gold and calcium — *L Dagens* 1167
The electronic structure of a liquid metal in the muffin-tin model — *J Bethell and J L Beeby* 1193
Hartree–Fock–Slater procedure for the calculation of optimised model potential parameters for aluminium — *P J Bunyan* 1207
The de Haas–van Alphen effect and Fermi surface of gadolinium
P G Mattocks and R C Young 1219
Self-consistent energy bands and Fermi surface of YZn — *A Hasegawa and A Yanase* 1229
Energy bandstructure and Fermi surface of LaB_6 by a self-consistent APW method
A Hasegawa and A Yanase 1245
On the temperature dependence of positron annihilation in cadmium
L C Smedskjaer, M J Fluss, M K Chason, D G Legnini and R W Siegel 1261
Scattering theory for crystal dislocations — *R A Brown* 1269
Electrical resistivity of dislocations in metals — *R A Brown* 1283
The effect of the energy dependence of the electron 'relaxation time' on the electrical resistivity of potassium — *C R Leavens* 1297
Dependence of the electron scattering rate on lattice relaxation in dilute Al alloys
P G Tomlinson, J P Carbotte and G R Piercy 1305
Magnetism and magnetic excitations in narrow-band metals
A A Bahurmuz and M J Zuckermann 1313
A theory of anomalies in the field dependence of the magnetization of strongly enhanced itinerant paramagnets — *G Barnea and D M Edwards* 1323
The electric field gradient at tantalum in a hafnium single crystal subjected to hydrostatic and uniaxial compression — *H Ernst, T Butz and A Vasquez* 1329
On temperature broadening in x ray spectra of metals — *L Hedin and A Rosengren* 1339
Magnetic anisotropy in dysprosium — *P B Fynbo* 1349

NO 8 AUGUST 1977

LETTERS TO THE EDITOR

Thermoelectric power of the pure noble metals at low temperatures
A M Guénault and D G Hawksworth L219
Effective medium approach and density of states in liquid metals — *W John and W Keller* L223
The effect of nonmagnetic inclusions on the easy direction of gadolinium
R L Smith, B K Tanner and W D Corner L229
On the ferromagnetic phase transition in Hubbard model — *F Brouers and C M Chaves* L233
Magnetic interactions and conduction electron polarisation studied by NMR in Heusler alloys
Le Dang Khoi, P Veillet and I A Campbell L237

PAPERS

Electron microscope image contrast from small dislocation loops: I. Theoretical predictions for edge dislocation loops in a BCC crystal — *B L Eyre, D M Maher and R C Perrin* 1359
Electron microscope image contrast from small dislocation loops: II. Application of theoretical predictions to defect analysis in irradiated metals — *B L Eyre, D M Maher and R C Perrin* 1371
An electron statistical vacancy model for the noble metals — *J-Å Schweitz and O Vingsbo* 1383
Studies of defects at thermal equilibrium and melting in Cu and Ni by positron annihilation
S Nanao, K Kuribayashi, S Taniqawa and M Doyama 1403
Excess vibrational entropy and local environment effects — *G Moraitis and F Gautier* 1421
Comments on the effect of impurities on the structural stabilisation of iron-rich binary alloys
C Demangeat and F Gautier 1435

Electronic structure of metals: IV. Transport coefficients of simple liquid metals
S Wang and C B So 1439
Electronic structure of metals: V. Density of states effective masses of the alkali metals
C B So, K Takegahara and S Wang 1453
Calculation of the bandstructure of aluminium using the model potential method
J A Nelson and P J Bunyan 1467
A dislocation model of grain boundary electrical resistivity *R A Brown* 1477
The magnetothermopower of molybdenum *R Fletcher, J L Opsal and B J Thaler* 1489
On the magnetic ordering in palladium–manganese dilute alloys
G Nieuwenhuys and B H Verbeek 1497
Gold–iron spin glasses in low DC fields: I. Susceptibility and thermoremanence *C N Guy* 1505
Direct Coulomb contribution of the conduction electrons to the crystalline electric field in cubic rare earth intermetallics *D Schmitt* 1521
Site selectivity and moment distribution in V and Cr substituted CoGa alloys
R Cywinski and J G Booth 1531
A functional-integral approach to the localised magnetic impurity problem *M Ahmed* 1543
Bulk and local magnetic susceptibilities of AuV Kondo alloys: Experiment in concentration-independent region *K Kume and K Mizoguchi* 1555
The magnetisation of the Kondo systems CuFe, AgFe, AuFe and MoFe
J G Pérez-Ramirez and P Steiner 1573
The effect of palladium on the itinerant antiferromagnetism of chromium
K R A Ziebeck, R Chagnon and J G Booth 1583
Crystal field effects in the ESR of gadolinium in polycrystalline cubic metallic compounds
P Urban and D Seipler 1589
The optical density of states of liquid gallium *C Norris and J T M Wotherspoon* 1599
Fine structure in the K absorption edge of rubidium *B K Agarwal and R K Johri* 1607
Optical properties of gallium films between 2 and 15 eV
G Jezequel, J C Lemonnier and J Thomas 1613
Application of multiband CPS to the ferromagnetic BCC Fe–V alloys *F Kajzar* 1623

NO 9 SEPTEMBER 1977

LETTERS TO THE EDITOR

Relaxed Bernal structure as a model of amorphous iron
R Yamamoto, H Matsuoka and M Doyama L243
Interpretation of the alloying tendencies of nontransition metals *C H Hodges* L274
Temperature and pressure dependence of positron mean lives in cadmium
J D McGervey, P Sen, I K MacKenzie and T McMullen L255
Electrical resistivity of highly disordered metallic materials at high temperatures
R Harris, M Shalmon and M Zuckermann L259
Thermal expansion in the magnetically ordered phases of holmium
D A Tindall, M O Steinitz and M L Plumer L263
A new method to evaluate the free energy for random magnetic systems *M W Klein* L267
Ferromagnetic resonance linewidths of nickel single crystals *C J Gadsden and M Heath* L273
Corrigendum *P B Fynbo* L278

PAPERS

The electronic structure of some A15 compounds by semiself-consistent band calculations
T Jarlborg and G Arbman 1635
Temperature dependence of monovacancy parameters for simple metals. Application to Na and Al *C H Leung and M J Stott* 1651
Temperature dependence of the magnetocrystalline anisotropy energy of terbium in the basal plane
R R Birss, G J Keeler and C H Shepherd 1669
Temperature dependence of the magnetocrystalline anisotropy energy of nickel in the (100) plane
R R Birss, G J Keeler and C H Shepherd 1683
A resistivity minimum in tungsten and its correlation with thermoelectric anomalies
C Uher, D C Mundinger and J Bass 1691

A model for the amorphous magnetism condition for ferromagnetic or spin glass transitions
M W Klein 1699
Phase transition of chromium at T_N *E W Fenton and C R Leavens* 1705
An investigation of positron annihilation in copper between 93 and 665 K
L C Smedskjaer, M J Fluss, D G Legnini, M K Chason and R W Siegel 1715
Relativistic bandstructure and Fermi surface of $PdTe_2$ by the LMTO method
J-P Jan and H L Skriver 1719
Magnetocrystalline anisotropy: Beyond first-order perturbation theory *G J Bowden* 1731
Crystal field effects in normal and superconducting LaAg doped with Tb
H E Hoenig, C Lingner, G Binnig and J Keller 1747
Self-consistent screening of a proton in jellium
E Zaremba, L M Sander, H B Shore and J H Rose 1763
A theory of Fano effects in the electronic structure of d metals and alloys *K Terakura* 1773
The temperature dependence of the electromagnetic generation of ultrasound in tin below 20 K
R H Bidgood, M J Lea and E R Dobbs 1781
Temperature and magnetic field dependence of the resistivity of amorphous alloys
R W Cochrane and J O Strom-Olsen 1799
Electric and magnetic properties of PtCr near the percolation limit
R M Roshko, J Maartense and G Williams 1811
Polarised neutron study of $HoCo_2$ *D Gignoux, F Givord and J Schweizer* 1823
A study of fibre textures in 'as cast' (rare earth) Co_2 compounds
P Hendy, E W Lee and M W Stringfellow 1835
Einstein temperature and vibrational entropy in relation to the electronic structure: I. Pure transition metals *G Moraitis and F Gautier* 1841
A simple model for impurity diffusion *A Rabinovitch and J Pelleg* 1853
The coherent potential approximation for nonoverlapping muffin-tin potentials: Paramagnetic Ni_xCu_{1-x} *G M Stocks, B L Gyorffy, E S Giuliano and R Ruggeri* 1859
The Hall effect in zinc *T C Genoni* 1867
Mean-square displacement of an interstitial impurity atom *K Ohashi and Y H Ohashi* 1875
The magnetic structure of $ErFe_3$ *R L Davis, R K Day and J B Dunlop* 1885
High-precision measurements of the Fermi surface of aluminium
P T Coleridge and P M Holtham 1891
Inelastic scattering of polarised neutrons by ferromagnetic Pd_3Fe *T M Holden and W G Stirling* 1901
Important parameters in strong-coupling superconductivity *C R Leavens* 1911
Optical studies of dilute CuNi alloys *D Beaglehole and C Kunz* 1923
The optical surface modes of metal spheres *A D Boardman and B V Paranjape* 1935
Ultraviolet photoemission studies of thallium *J H P Castelijns and A R de Vroomen* 1947
The structural phase transformation of $CeAg_xIn_{1-x}$ in the silver-rich concentration range
H Ihrig and W Lohmann 1957
Spin waves in HoZn *J Pierre, D Schmitt, P Morin and B Hennion* 1965
A double d band model of transition metals: Magnetic susceptibility of exchange-enhanced paramagnets *J Zieliński* 1973
The line-defect content of tilt boundaries *R A Brown* 1977

NO 10 OCTOBER 1977

LETTER TO THE EDITOR
Coupling of electronically excited physisorbed atoms to metal substrates: Xe on Au and Ti
J E Cunningham, D Greenlaw, J L Erskine, P R Layton and C P Flynn L281

PAPERS
Temperature dependence of positron trapping in silver and nickel
J L Campbell, C W Schulte and J A Jackman 1985
Formulation of vacancy properties within a semilinear approach *L M Kahn and M Rasolt* 1993
Theory of vacancy formation volume *M W Finnis and R M Nieminen* 1999
Frenkel pair recombination radius in copper as a function of temperature
R Lennartz, F D Dworschak and H Wollenberger 2011

Atomic simulation of the $a/2\langle 111\rangle\{110\}$ edge dislocation in alpha-iron
B L Adams, J P Hirth, P C Gehlen and R G Hoagland 2021
The effects of ion-implanted impurities on the anodic oxidation of titanium
G H Gleaves, G Dearnaley and R A Collins 2031
The effect of positron–phonon scattering on positron trapping at defects in metals: Formalism and low-order theory *T McMullen* 2041
A KKRZ calculation on indium: I. An *ab initio* approach
D B B Rijsenbrij, J A Radder, A B M Hoff and D G de Groot 2067
A KKRZ calculation on indium: II. The Fermi surface as determined from radiofrequency size effect measurements *D G de Groot, A B M Hoff, D B B Rijsenbrij and J H P van Weeren* 2077
Spontaneous resistivity anisotropy in nickel–copper alloys *S N Kaul* 2091
Exact expressions for the surface impedance of a metal in a magnetic field *K Saermark* 2109
Surface impedance of a metal in a magnetic field and cyclotron waves: Numerical calculations
K Saermark, J Lebech and H Johansen 2121
Anomalous behaviour of RFSE signals in tungsten *P E Beacock and A Myers* 2135
Mixed state in antiferromagnetic chromium *R Griessen and E Fawcett* 2141
Neutron polarisation analysis of scattering from antiferromagnetic γ-MnCu and γ-MnPd
J R Davis and T J Hicks 2153
Generalised mean field theory of spin glasses *W Kinzel and K H Fischer* 2163
Magnetic properties of thulium *P B Fynbo* 2179
Relaxation phenomena and host exchange parameters in Tm van Vleck compounds
V Zevin, D Davidov, R Levin, D Shaltiel and K Baberschke 2193
The influence of cation distribution on the quadrupole interaction in the Cd_xNi_{1-x} ferrite system
N A Eissa, A A Bahgat and M K Fayek 2209
Temperature dependence of optical properties of Ta–W–Re alloys
B U Habedank, L K Thomas and S Thurm 2217
Magnetoreflection of arsenic for circularly polarised radiation
M G Priestley and M H B Thomas 2225
X ray L_1, L_2 and L_3 absorption limits of Mo *S Kawata and K Maeda* 2243
UPS spectra for Cu in the range 14–45 eV *G P Williams, C Norris and M R Howells* 2247

NO 11 NOVEMBER 1977

LETTERS TO THE EDITOR

A note on the solubility and the heat of solution of impurities in BCC transition metals
K Terakura L287
Effects of the energy dependence of the electron distribution function on electrical resistivities
K Takegahara and S Wang L293
A comparison of two theories of dislocation resistivity *R A Brown* L297
Electrical resistivity of Cd–Mg alloys: Effect of phonon local modes
J A Rowlands, B J Stackhouse and S B Woods L301
X ray photoelectron studies of scandium and its hydride and oxide
J K Gimzewski, D J Fabian, L M Watson and S Affrossman L305
X ray photoemission investigation of the density of states of simple metals
H Höchst, P Steiner and S Hüfner L309

PAPERS

Phonon spectrum of metallic lithium from first-principles bandstructure
K H Wielacher and H Bross 2253
Pseudopotential theory of the solid–liquid transition in binary alloys: Applications to Cd_xMg_{1-x} and Na_xK_{1-x} *M Hasegawa and W H Young* 2271
The isotope effect for the diffusion of hydrogen in niobium *G Matusiewicz and H K Birnbaum* 2285
A new procedure for the determination of parameters in Heine–Aberenkov type model potentials
E R Cowley, A Leaver and H Braul 2291
Effect of correlation on the bandstructures of Th and Os
K Iyakutti, R Asikamani and V Devanathan 2307
The valence charge density in aluminium *P J Bunyan and J A Nelson* 2323

On the temperature dependence of the electrical resistivity of amorphous metals
K Froböse and J Jäckle 2331
Semiclassical theory of phonon-drag magnetothermoelectricity in metals *J L Opsal* 2349
Nuclear quadrupole relaxation in liquid metals and alloys
R L Havill, J Marsden and J M Titman 2357
Hall coefficients of liquid bismuth alloys *I Shiota and S Tamaki* 2361
Semiconducting ytterbium at high temperatures *V Shubba, T G Ramesh and S Ramaseshan* 2367
Flux flow in longitudinal geometry *D G Walmsley and W E Timms* 2373
The elastic and magnetic properties of a single-crystal Gd–40%Y alloy
S B Palmer, D Hukin and C Isci 2381
The critical concentration for the onset of ferromagnetism in CuNi alloys
J C Ododo and B R Coles 2393
Improved itinerant-localised electron model for magnetism of transition metals *L Adamowicz* 2401
Hyperfine fields at Cd impurities in Pd_2MnY (Y = In, Sn, Sb) and PtMnY (Y = Sn, Sb)
B Lindgren, K Pernestål, S Bedi and E Karlsson 2405
Magnetic excitations in Pd_3Fe *A J Smith, W G Stirling and T M Holden* 2411
Spin adjustments in (Gd, Dy)Al_2 *P Miles, M A A Issa, K N R Taylor and G J Bowden* 2421
Optical constants of gadolinium at various temperatures from polarimetric measurements
J P Petrakian, N Ahmed Mokhtar and R Fraisse 2431
On the quantitative evaluation of XPS lineshape asymmetries for free-electron-like metals
Petter Minnhagen 2441
Atomic M lines of metallic plutonium *G Lacheré* 2451
Ultraviolet photoemission properties of metallic tin
J H P Castelijns, H W J M Aan de Brugh and A R de Vroomen 2457

NO 12 DECEMBER 1977

LETTERS TO THE EDITOR

Changes in cell dimensions at the martensitic transformation in γ Mn–Cu alloys
N Cowlam, G E Bacon and L Gillott L315
Resistivity anomalies in rare earth and transition metals and their alloys *L V Meisel and P J Cole* L321
Resistivity of $DyNi_3$ and $HoNi_3$ amorphous alloys
R Asomoza, A Fert, I A Campbell and R Meyer L327
Monte Carlo evidence for the absence of a phase transition in the low-dimensional Ising glass
A J Bray and M A Moore L333
Kondo alloys and the superconducting proximity effect *A B Kaiser* L339
Excitation of Fe 1s core level photoelectrons with synchrotron radiation
D J Fabian, J Gimzewski, A Barrie and B Dev L345

PAPERS

Thermal diffuse x ray scattering from sodium single crystals *W Adlhart, H C Alt and G Fritsch* 2467
Structure of liquid eutectic Ag–Ge by neutron diffraction
M-C Bellissent-Funel, P J Desré, B Bellissent and G Tourand 2485
Density of states in the K excitation spectra of solid and liquid lithium *H Petersen and C Kunz* 2495
The low-temperature thermopower of Frenkel defects in aluminium
G Sieber, G Wehr and K Böning 2503
Calculation on electrical resistivity and thermoelectric power of nonsimple metals
S N Khanna and A Jain 2523
The anisotropy of electron–impurity scattering in potassium: I. Study using the de Haas–van Alphen effect *B Llewellyn, D M°K Paul, D J Randles and M Springford* 2531
Anisotropy of electron scattering in potassium: II
B Llewellyn, D M°K Paul, D J Randles and M Springford 2545
An estimate of the Kondo temperature of AgFe from susceptibility measurements *M Hanson* 2555
Hyperfine fields at sp sites in Heusler alloys *Le Dang Khoi, P Veillet and I A Campbell* 2561
Small-angle neutron scattering from superparamagnetic assemblies in binary CoGa alloys
R Cywinski, J G Booth and B D Rainford 2567

Polarised neutron study of the concentration dependence of magnetic moment distribution in iron–vanadium alloys *P Radhakrishna, J Brown and F Kajzar* 2583
Concentration and temperature dependent nuclear relaxation in liquid In–Sn, Bi–Sn and In–Pb, Bi–Pb alloys *R Brandenburg, B Kokavecz and K Kramer* 2593
Systematics of the electron momentum distribution in some 3d transition metals *D G Kanhere and R M Singru* 2603
Optical properties of white tin films between 2 and 15 eV *G Jézéquel, J C Lemonnier and J Thomas* 2613
Electron binding energies of core levels in caesium adsorbed on a nickel (100) surface *N G Krishnan, W N Delgass and W D Robertson* 2623
New method for the Anderson model: II. The $U = 0$ limit *S E Barnes* 2637

Subject index

The 1977 subject index is based on the ICSU/AB International Classification for Physics; articles are listed, as appropriate, under one or more of the following headings:

60.00 CONDENSED MATTER: STRUCTURE, THERMAL AND MECHANICAL PROPERTIES

61.00 STRUCTURE OF LIQUIDS AND SOLIDS; CRYSTALLOGRAPHY
61.10 X ray determination of structures
61.12 Neutron determination of structures
61.14 Electron determination of structures
61.14F *Experimental diffraction and scattering*
61.20 Classical, semiclassical, and quantum theories of liquid structure
61.25 Studies of specific liquid structures
61.25M *Liquid metals*
61.40 Amorphous and polymeric materials
61.50 Crystalline state
61.50L *Crystal binding*
61.55 Specific structure of elements and alloys
61.55H *Alloys*
61.70 Defects in crystals
61.70B *Interstitials and vacancies*
61.70E *Other point defects*
61.70G *Dislocations: theory*
61.70P *Stacking faults, stacking fault tetrahedra, and other planar or extended defects*
61.80 Radiation damage and other irradiation effects
61.80F *Electrons and positrons*
61.80J *Ions*
61.80L *Atoms and molecules*

62.00 MECHANICAL AND ACOUSTIC PROPERTIES OF CONDENSED MATTER
62.20 Mechanical properties of solids (related to microscopic structure)
62.20D *Elastic constants*
62.40 Anelasticity, internal friction, and mechanical resonances
62.65 Acoustic properties of solids
62.80 Ultrasonic relaxation
62.90 Other topics in mechanical and acoustical properties of condensed matter

63.00 LATTICE DYNAMICS AND CRYSTAL STATISTICS
63.10 General theory
63.20 Phonons and vibrations in crystal lattices
63.20D *Phonon states and bands, normal modes, and phonon dispersion*
63.50 Vibrational states in disordered systems
63.70 Statistical mechanics of lattice vibrations

64.00 EQUATIONS OF STATE, PHASE EQUILIBRIA, AND PHASE TRANSITIONS
64.10 General theory of equations of state and phase equilibria
64.60 General studies of phase transitions
64.70 Phase equilibria, phase transitions, and critical points of specific substances
64.70D *Solid–liquid transitions*
64.70F *Liquid–vapour transitions*
64.70K *Solid–solid transitions*
64.75 Solubility, segregation, and mixing

65.00 THERMAL PROPERTIES OF CONDENSED MATTER
65.40 Heat capacities of solids
65.50 Thermodynamic properties and entropy
65.70 Thermal expansion and thermomechanical effects

66.00 TRANSPORT PROPERTIES OF CONDENSED MATTER (NONELECTRONIC)
66.10 Diffusion and ionic conduction in liquids
66.30 Diffusion in solids

68.00 SURFACES AND INTERFACES; THIN FILMS AND WHISKERS
68.48 Solid–solid interfaces
68.90 Other topics in the structure and nonelectronic properties of surfaces and thin films

70.00 CONDENSED MATTER: ELECTRONIC STRUCTURE, ELECTRICAL, MAGNETIC, AND OPTICAL PROPERTIES

71.00 ELECTRON STATES
71.10 General theories and computational techniques
71.20 Electronic density of states determinations
71.25 Nonlocalised single-particle electronic states
71.25C *Techniques of bandstructure calculation (general theory, applications of group theory, analytic continuation, etc.)*
71.25L *Electron energy states in liquid metals*
71.25M *Electron energy states in amorphous and glassy solids*
71.25P *Bandstructure of crystalline metals*
71.25T *Bandstructure of crystalline semiconductor compounds and insulators*
71.30 Metal–insulator transitions
71.35 Excitons and related phenomena
71.38 Polarons and electron–phonon interactions
71.50 Localised single-particle electronic states
71.55 Impurity and defect levels
71.65 Positron states
71.90 Other topics in electron states

72.00 ELECTRONIC TRANSPORT IN CONDENSED MATTER
72.10 Theory of electronic transport; scattering mechanisms
72.15 Electronic conduction in metals and alloys
72.15C *Electrical and thermal conduction in amorphous and liquid metals and alloys*
72.15E *Electrical and thermal conduction in crystalline metals and alloys*
72.15G *Galvanomagnetic and other magnetotransport effects*
72.15H *Thermomagnetic effects*
72.15J *Thermoelectric effects*
72.15L *Relaxation times and mean free paths*
72.20 Conductivity phenomena in semiconductors and insulators
72.30 High-frequency effects; plasma effects

73.00 ELECTRONIC STRUCTURE AND ELECTRICAL PROPERTIES OF SURFACES, INTERFACES, AND THIN FILMS
73.20 Electronic surface states
73.90 Other topics in electrical properties of surfaces, interfaces, and thin films

74.00 SUPERCONDUCTIVITY
74.20 Theory
74.50 Proximity effects, tunnelling phenomena, and Josephson effect
74.60 Type II superconductivity
74.70 Superconducting materials
74.90 Other topics in superconductivity

75.00 MAGNETIC PROPERTIES AND MATERIALS
75.10 General theory and models of magnetic ordering
75.10D *Crystal field theory and spin Hamiltonians*
75.10H *Ising and other classical spin models*
75.10L *Band and itinerant models*
75.20 Diamagnetism and paramagnetism
75.20E *Metals and alloys*
75.20H *Local moment in dilute alloys; Kondo effect*
75.25 Spin arrangements in magnetically ordered materials (neutron studies, etc.)
75.30 Magnetically ordered materials, other intrinsic properties
75.30C *Saturation moments and magnetic susceptibility*
75.30D *Spin waves*
75.30E *Exchange and superexchange interactions*
75.30G *Anisotropy*
75.30H *Magnetic impurity interactions*
75.40 Critical-point effects, specific heats, short-range order
75.50 Studies of specific magnetic materials
75.50B *Ferromagnetism of Fe and its alloys*
75.50C *Ferromagnetism of other metals*
75.50E *Antiferromagnetics*
75.50G *Ferrimagnetics*
75.50K *Amorphous magnetic materials*
75.60 Domain effects, magnetisation curves, and hysteresis
75.80 Magnetomechanical and magnetoelectric effects, magnetostriction

76.00 MAGNETIC RESONANCES AND RELAXATION IN CONDENSED MATTER; MOSSBAUER EFFECT
76.30 Electron spin resonance and relaxation
76.30D *Ions and impurities: general*
76.50 Ferromagnetic, antiferromagnetic, and ferrimagnetic resonances; spin wave resonance
76.60 Nuclear magnetic resonance and relaxation
76.60C *Chemical and Knight shifts*
76.60G *Quadrupole resonance*

76.80 Mössbauer effect; other gamma ray spectroscopy
76.90 Other topics in magnetic resonances and relaxation

78.00 OPTICAL PROPERTIES AND CONDENSED-MATTER SPECTROSCOPY AND OTHER INTERACTIONS OF MATTER WITH PARTICLES AND RADIATION
78.20 Optical properties and materials
78.20D *Optical constants and parameters*
78.20L *Magneto-optical effects*
78.65 Optical properties of thin films
78.70 Other interactions of matter with particles and radiation
78.70D *X ray absorption and absorption edges*
78.70E *X ray emission threshold and fluorescence*

79.00 ELECTRON AND ION EMISSION BY LIQUIDS AND SOLIDS, IMPACT PHENOMENA
79.20 Impact phenomena
79.60 Photoemission and photoelectron spectra

80.00 **CROSS-DISCIPLINARY PHYSICS AND RELATED AREAS OF SCIENCE AND TECHNOLOGY**

81.00 MATERIALS SCIENCE
81.10 Methods of crystal growth and purification
81.10J *Growth from solid phases*
81.30 Phase diagrams and microstructures developed by solidification and solid–solid phase transformations
81.30B *Phase diagrams of metals and alloys*
81.70 Materials testing

BLANK
PAGE

60.00 CONDENSED MATTER: STRUCTURE, THERMAL AND MECHANICAL PROPERTIES

61.00 STRUCTURE OF LIQUIDS AND SOLIDS; CRYSTALLOGRAPHY

61.10 X ray determination of structures

Structural, electronic and magnetic properties of splat-quenched FeC_x alloys ($x \leqslant 0{\cdot}05$) *M C Cadeville, J M Friedt and C Lerner* F123

Thermal diffuse x ray scattering from sodium single crystals *W Adlhart, M C Alt and G Fritsch* F2467

61.12 Neutron determination of structures

Application of multiband CPA to the ferromagnetic BCC Fe–V alloys *F Kajzar* F1623

Site selectivity and moment distribution in V and Cr substituted CoGa alloys *R Cywinski and J G Booth* F1531

Polarised neutron study of $HoCo_2$ *D Gignoux, F Givord and J Schweizer* F1823

A study of fibre textures in 'as cast' (rare earth) Co_2 compounds *P Hendy, E W Lee and M W Stringfellow* F1835

Inelastic scattering of polarised neutrons by ferromagnetic Pd_3Fe *T M Holden and W G Stirling* F1901

Structure of liquid eutectic Ag–Ge by neutron diffraction *M-C Bellissent-Funel, P J Desré, R Bellissent and G Tourand* F2485

Polarised neutron study of the concentration dependence of magnetic moment distribution in iron–vanadium alloys *P Radhakrishna, J Brown and F Kajzar* F2583

61.14 Electron determination of structures

An investigation of the atomic arrangements in some amorphous rare earth–transition metal alloys *S S Nandra and P J Grundy* F207

61.14F Experimental diffraction and scattering

Kohn anomaly in the $1T_2$ phase of TaS_2 *K R A Ziebeck, B Dorner, W G Stirling and R Schöllhorn* F1139

Electron microscope image contrast from small dislocation loops: I. Theoretical predictions for edge dislocation loops in a BCC crystal *B L Eyre, D M Maher and R C Perrin* F1359

Electron microscope image contrast from small dislocation loops: II. Application of theoretical predictions to defect analysis in irradiated metals *B L Eyre, D M Maher and R C Perrin* F1371

Magnetic excitations in Pd_3Fe *A J Smith, W G Stirling and T M Holden* F2411

61.20 Classical, semiclassical, and quantum theories of liquid structure

Higher-order partial structure factors for multicomponent systems *M Silbert, P Gray and S M Johnson* F367

61.25 Studies of specific liquid structures

61.25M Liquid metals

Experimental evidence for concentration fluctuations in liquid sodium–caesium alloys *M J Huijben, T Lee, W Reimert and W van der Lugt* FL119

The structure of liquid Ce–Ni alloys *Y Waseda and S Tamaki* FL151

Resistivity of liquid transition metals and their alloys using the t matrix *K Hirata, Y Waseda, A Jain and R Srivastava* F419

Calculation of the neutron scattering law of liquid aluminium *E Michler, H Hahn and P Schofield* F869

61.40 Amorphous and polymeric materials

Relaxed Bernal structure as a model of amorphous iron *R Yamamoto, H Matsuoka and M Doyama* FL243

An investigation of the atomic arrangements in some amorphous rare earth–transition metal alloys *S S Nandra and P J Grundy* F207

61.50 Crystalline state

61.50L Crystal binding

An electron statistical model for the cohesion of copper *J-Á Schweitz and O Vingsbo* F219

The energy of interstitial impurities in transition metals: H in Pd *C A Sholl and P V Smith* F789

Energy of cohesion in transition metals *F Kajzar and J Mizia* F1115

61.55 Specific structure of elements and alloys

Interpretation of the alloying tendencies of nontransition metals *C H Hodges* FL247

61.55H Alloys

The structural phase transformation of $CeAg_xIn_{1-x}$ in the silver-rich concentration range *H Ihrig and W Lohmann* F1957

61.70 Defects in crystals

The 50 K transition in palladium hydrogen alloys: II. Specific heat and thermal relaxation *J K Jacobs and F D Manchester* F23

On the temperature dependence of positron trapping in deformed copper *P Rice-Evans and Tin Hlaing* F821

An experimental study of dia- and paraelastic effects in e^--irradiated copper *L E Rehn and K-H Robrock* F1107

Electron microscope image contrast from small dislocation loops: I. Theoretical predictions for edge dislocation loops in a BCC crystal *B L Eyre, D M Maher and R C Perrin* F1359

Electron microscope image contrast from small dislocation loops: II. Application of theoretical predictions to defect analysis in irradiated metals *B L Eyre, D M Maher and R C Perrin* F1371

Frenkel pair recombination radius in copper as a function of temperature *R Lennartz, F Dworschak and H Wollenberger* F2011

61.70B Interstitials and vacancies
On the problem of displacement threshold determination in irradiated metals: Subthreshold effects and recovery spectrum *P Vajda, M Biget, A Lucasson and P Lucasson* FL123
Temperature and pressure dependence of positron mean lives in cadmium *J D McGervey, P Sen, I K MacKenzie and T McMullen* FL255
On the effect of vacancy migration upon the annihilation of a trapped positron in metals *S W Tam and R W Siegel* F877(5)†
On the temperature dependence of positron annihilation in cadmium *L C Smedskjaer, M J Fluss, M K Chason, D G Legnini and R W Siegel* F1261
An electron statistical vacancy model for the noble metals *J-Å Schweitz and O Vingsbo* F1383
Studies of defects at thermal equilibrium and melting in Cu and Ni by positron annihilation *S Nanao, K Kuribayashi, S Tanigawa and M Doyama* F1403
Mean-square displacement of an interstitial impurity atom *K Ohashi and Y H Ohashi* F1875
Formulation of vacancy properties within a semilinear approach *L M Kahn and M Rasolt* F1993
Theory of vacancy formation volume *M W Finnis and R M Nieminen* F1999

61.70E Other point defects
Vacancy-induced crystal dilation and its influence on formation volume and energy *J-Å Schweitz and O Vingsbo* F1
Volume change in some substitutional alloys using Morse potential function *S K Das, D Roy and S Sengupta* F5
Secondary defects in quenched aluminium studied by Mössbauer spectroscopy *Ch Janot and H Georges-Gibert* F231
Formation energy of vacancies in disordered transitional alloys *J van der Rest, J Giner and F Gautier* F243
An experimental study of dia- and paraelastic effects in e^--irradiated copper *L E Rehn and K-H Robrock* F1107
Single and multiple interstitials in FCC metals *H R Schober* F1127
Temperature dependence of monovacancy parameters for simple metals. Application to Na and Al *C H Leung and M J Stott* F1651
Temperature dependence of positron trapping in silver and nickel *J L Campbell, C W Schulte and J A Jackman* F1985

† Owing to a pagination error, references to papers whose page numbers are marked with a dagger should include the issue number in addition to volume and page numbers. This is given in parentheses.

61.70G Dislocations: theory
Dislocation electrical resistivity and resonance scattering *R A Brown* FL95
The 'golden rule' for dislocation scattering *R A Brown* FL155
Scattering theory for crystal dislocations *R A Brown* F1269
The line-defect content of tilt boundaries *R A Brown* F1977
Atomic simulation of the $a/2\langle 111\rangle\{110\}$ edge dislocation in alpha-iron *B L Adams, J P Hirth, P C Gehlen and R G Hoagland* F2021

61.70P Stacking faults, stacking fault tetrahedra, and other planar or extended defects
A dislocation model of grain boundary electrical resistivity *R A Brown* F1477

61.80 Radiation damage and other irradiation effects
On the problem of displacement threshold determination in irradiated metals: Subthreshold effects and recovery spectrum *P Vajda, M Biget, A Lucasson and P Lucasson* FL123
Fast neutron radiation damage in aluminium studied by interstitial trapping at ^{57}Co Mössbauer atoms *W Mansel and G Vogl* F253

61.80F Electrons and positrons
An experimental study of dia- and paraelastic effects in e^--irradiated copper *L E Rehn and K-H Robrock* F1107
Frenkel pair recombination radius in copper as a function of temperature *R Lennartz, F Dworschak and H Wollenberger* F2011

61.80J Ions
The effects of ion-implanted impurities on the anodic oxidation of titanium *G H Gleaves, G Dearnaley and R A Collins* F2031

61.80L Atoms and molecules
The effects of ion-implanted impurities on the anodic oxidation of titanium *G H Gleaves, G Dearnaley and R A Collins* F2031

62.00 MECHANICAL AND ACOUSTIC PROPERTIES OF CONDENSED MATTER

62.20 Mechanical properties of solids (related to microscopic structure)
Influence of deformation on the low-temperature specific heat of a dilute α phase Pd–H alloy *U Mizutani, T B Massalski, J Bevk and R R Vandervoort* FL63

62.20D Elastic constants
Single crystal elastic constants of neodymium from 4·2 to 300 K *J T Lenkkeri and S B Palmer* F15
The elastic and magnetic properties of a single-crystal Gd–40%Y alloy *S B Palmer, D Hukin and C Isci* F2381

62.40 Anelasticity, internal friction, and mechanical resonances
Theory of energy bands and related properties of 4d-transition metals: II. The electron–phonon matrix element, superconductivity and ion core enhancement *D G Pettifor* F1009
62.65 Acoustic properties of solids
Single crystal elastic constants of neodymium from 4·2 to 300 K *J T Lenkkeri and S B Palmer* F15
62.80 Ultrasonic relaxation
The temperature dependence of the electromagnetic generation of ultrasound in tin below 20 K *R H Bidgood M J Lea and E R Dobbs* F1791
62.90 Other topics in mechanical and acoustic properties of condensed matter
Longitudinal ultrasonic attenuation of single crystal erbium *P de V du Plessis and C Elbaum* F273

63.00 LATTICE DYNAMICS AND CRYSTAL STATISTICS
Anharmonicity and the Debye–Waller factors in BCC metals *V P Singh and M P Hemkar* F753
Dynamical study for the Grüneisen parameters in FCC metals *V P Singh and M P Hemkar* F761
On the angular force models of de Launay and CGW *J C Upadhyaya* F769
63.10 General theory
Comparison of statistical and Lindgren conduction–core exchange approximations in *a priori* pseudopotential calculations for the lattice dynamics of metals *R S Day, F Sun, P H Cutler and Walter F King III* FL169
Phonon spectrum of metallic lithium from first-principles bandstructure *K H Weilacher and H Bross* F2253
63.20 Phonons and vibrations in crystal lattices
Concentration dependence of acoustic phonons of NbD_x alloys *N Stump, A Magerl, G Alefeld and E Schedler* FL1
Zero to first sound transition in copper *A Loidl* FL57
Phonon–phonon scattering relaxation times for potassium *M Kaveh* F551
Kohn anomaly in the $1T_2$ phase of TaS_2 *K R A Ziebeck, B Dorner, W G Stirling and R Schöllhorn* F1139

† Owing to a pagination error, references to papers whose page numbers are marked with a dagger should include the issue number in addition to volume and page numbers. This is given in parentheses.

63.20D Phonon states and bands, normal modes, and phonon dispersion
Comparison of statistical and Lindgren conduction–core exchange approximations in *a priori* pseudopotential calculations for the lattice dynamics of metals *R S Day, F Sun, P H Cutler and Walter F King III* FL169
A search for anomalous phonons in potassium *G Dolling and J Meyer* F775
63.50 Vibrational states in disordered systems
Concentration dependence of acoustic phonons of NbD_x alloys *N Stump, A Margerl, G Alefeld and E Schedler* FL1
63.70 Statistical mechanics of lattice vibrations
Comparison of statistical and Lindgren conduction–core exchange approximations in *a priori* pseudopotential calculations for the lattice dynamics of metals *R S Day, F Sun, P H Cutler and Walter F King III* FL169

64.00 EQUATIONS OF STATE, PHASE EQUILIBRIA, AND PHASE TRANSITIONS
64.10 General theory of equations of state and phase equilibria
First-order phase transition in superconducting sandwiches *N Rivier and A A Babaei Brojeny* FL111
64.60 General studies of phase transitions
First-order phase transition in superconducting sandwiches *N Rivier and A A Babaei Brojeny* FL111
64.70 Phase equilibria, phase transitions, and critical points of specific substances
On the energetics of the γ–α phase transition in cerium metal: Determination of the atomic excitation $fds^2 \rightarrow d^2s^2$ *B Johansson* F877(6)†
Excess vibrational entropy and local environment effects *G Moraitis and F Gautier* F1421
64.70D Solid–liquid transitions
Pseudopotential theory of the solid–liquid transition in binary alloys: Applications to Cd_xMg_{1-x} and Na_xK_{1-x} *M Hasegawa and W H Young* F2271
64.70F Liquid–vapour transitions
Liquid–vapour transition in fluid metals: Application to sodium at low pressures *P Minchin, M Watabe and W H Young* F563
64.70K Solid–solid transitions
Changes in cell dimensions at the martensitic transformation in γ Mn–Cu alloys *C N Cowlam, G E Bacon and L Gillott* FL315
The 50 K transition in palladium hydrogen alloys: II. Specific heat and thermal relaxation *J K Jacobs and F D Manchester* F23

Phase transitions in ytterbium under pressure *T G Ramesh, V Shubha and S Ramaseshan* F981
Structural changes associated with antiferromagnetic ordering in Mn-rich Mn–Ni alloys *U Hocke and H Warlimont* F1145
Comments on the effect of impurities on the structural stabilisation of iron-rich binary alloys *C Demangeat and F Gautier* F1435
The structural phase transformation of $CeAg_xIn_{1-x}$ in the silver-rich concentration range *H Ihrig and W Lohmann* F1957

64.75 Solubility, segregation, and mixing
Interpretation of the alloying tendencies of nontransition metals *C H Hodges* FL247

65.00 THERMAL PROPERTIES OF CONDENSED MATTER
Temperature dependence of monovacancy parameters for simple metals. Application to Na and Al *C H Leung and M J Stott* FL1651

65.40 Heat capacities of solids
Influence of deformation on the low-temperature specific heat of a dilute α phase Pd–H alloy *U Mizutani, T B Massalski, J Bevk and R R Vandervoort* FL63
The 50 K transition in palladium hydrogen alloys: II. Specific heat and thermal relaxation *J K Jacobs and F D Manchester* F23
Electronic structure of intermetallic compounds with CsCl structure *D Seipler, B Bremicker, U Goebel, H Happel, H E Hoenig, B Perrin* F599

65.50 Thermodynamic properties and entropy
Einstein temperature and vibrational entropy in relation to the electronic structure: I. Pure transition metals *G Moraitis and F Gautier* F1841

65.70 Thermal expansion and thermomechanical effects
Thermal expansion in the magnetically ordered phases of holmium *D A Tindall, M O Steinitz and M L Plumer* FL263
Grüneisen parameters, electron–phonon enhancement and superconductivity for Pd–H Alloys *T F Smith and G K White* F1029

66.00 TRANSPORT PROPERTIES OF CONDENSED MATTER (NONELECTRONIC)

66.10 Diffusion and ionic conduction in liquids
Nuclear quadrupole relaxation in liquid metals and alloys *R L Havill, J Marsden and J M Titman* F2357

66.30 Diffusion in solids
Investigation of the anomalous temperature dependence of the self-diffusion constant of hydrogen in niobium by quasielastic neutron scattering *D Richter, B Alefeld, A Heidemann and N Wakabayashi* F569
Neutron radiographic measurement of the diffusion of H in β-Ti, V, Nb and Ta *A Zeilinger and W A Pochman* F575
A simple model for impurity diffusion *A Rabinovitch and J Pelleg* F1853
The isotope effect for the diffusion of hydrogen in niobium *G Matusiewicz and H K Birnbaum* F2285

68.00 SURFACES AND INTERFACES: THIN FILMS AND WHISKERS

68.20 Solid surface structure
Theoretical analysis of (100) and (111) faces of copper *C Tejedor* F991

68.48 Solid-solid interfaces
Interaction between metallic surfaces *R M Nieminen* F375

68.90 Other topics in the structure and nonelectronic properties of surfaces and thin films
A dislocation model of grain boundary electrical resistivity *R A Brown* F1477

70.00 CONDENSED MATTER: ELECTRONIC STRUCTURE, ELECTRICAL, MAGNETIC, AND OPTICAL PROPERTIES

71.00 ELECTRON STATES
On the charge-ordered solution of the Hubbard model *F Brouers* FL87
Experimental evidence of a screening charge anisotropy around several normal impurities in aluminium *M Minier and S Ho Dung* F503
The effect of positron–phonon scattering on positron trapping at defects in metals: Formalism and low-order theory *T McMullen* F2041

71.10 General theories and computational techniques
An energy dependent model pseudopotential *C B So and S Wang* F35
The exact summation of asymptotic ion-pair potentials in simple metallic structures *M S Duesbery and R Taylor* F47
Comments on transition metal surface calculations *D G Dempsey and L Kleinman* F113
The density of states of a muffin-tin Hamiltonian *R L Jacobs and N Zaman* F283

Parametrization of transition metal bandstructures via Hubbard's scheme *B Vasvári* F385
An interpolation scheme for the BCC transition metals *S K Baker and P V Smith* F781
Correlation effects in the cohesive properties of the transition metals *C M Sayers* F1157
The resonant model potential: II. Total energy: Theory and application to copper, silver, gold and calcium *L Dagens* F1167
Application of multiband CPA to the ferromagnetic BCC Fe–V alloys *F Kajzar* F1623
Self-consistent screening of a proton in jellium *E Zaremba, L M Sander, H B Shore and J H Rose* F1763
A new procedure for the determination of parameters in Heine–Abarenkov type model potentials *E R Cowley, A Leaver and H Braul* F2291

71.20 Electronic density of states determinations

Electrons around a vacancy in simple metals *G Mori* FL7
Electronic structure of bulk and surface disordered alloys *M C Desjonquères and F Cyrot-Lackmann* F61
Electronic structure of CsAu *A Hasegawa and M Watabe* F75
Charge transfer in alloys *D M Cragg and G C Fletcher* F87
Comments on transition metal surface calculations *D G Dempsey and L Kleinman* F113
Ultraviolet photoelectron spectroscopy of the valence bands of some Ag alloys *J A Nicholson, J D Riley, R C G Leckey, J Liesegang and J G Jenkin* F351
The electronic structure of dilute transitional impurities in simple metals *P V Smith* F585
Electron density of states of interstitial impurities in transition metals: H in Pd *C A Sholl and P V Smith* F799
An exact Green function treatment for dilute impurities in transitional and noble metal hosts *C A Sholl and P V Smith* F901
The effect of nonorthogonality in the density of states of some metallic disordered systems *M Weissmann and N V Cohan* F913
Occurrence of the sigma phase computed from a cluster model *M Brauwers* F921
Electronic structure of metals: V. Density of states effective masses of the alkali metals *C B So, K Takegahara and S Wang* F1453
UPS spectra for Cu in the range 14–45 eV *G P Williams, C Norris and M R Howells* F2247
Density of states in the K excitation spectra of solid and liquid lithium *H Petersen and C Kunz* F2495

71.25 Nonlocalised, single particle electronic states

Structural aspects of energy in binary alloys *V K Ratti and A B Bhatia* F647
A theory of Fano effects in the electronic structure of d band metals and alloys *K Terakura* F1773
Effect of correlation on the bandstructures of Th and Os *K Iyakutti, R Asokamani and V Devanathan* F2307
The valence charge density in aluminium *P J Bunyan and J A Nelson* F2323

71.25C Techniques if bandstructure calculation (general theory, applications of group theory, analytic continuation, etc)

Orbital effect on a band calculation *S Wakoh* FL15
The de Haas–van Alphen effect in terbium *P G Mattocks and R C Young* FL19
The electronic structure of some A15 compounds by semiself-consistent band calculations *T Jarlborg and G Arbman* F1635
Relativistic bandstructure and Fermi surface of $PdTe_2$ by the LMTO method *J-P Jan and H L Skriver* F1719
The coherent potential approximation for nonoverlapping muffin-tin potentials: paramagnetic Ni_xCu_{1-x} *G M Stocks, B L Gyorffy, E S Giuliano and R Ruggeri* F1859
A KKRZ calculation on indium: I. An *ab initio* approach *D B B Rijsenbrij, J A Radder, A B M Hoff and D G de Groot* F2067

71.25L Electron energy states in liquid metals

Effective medium approach and density of states in liquid metals *W John and W Keller* FL223
The electronic structure of a liquid metal in the muffin-tin model *J Bethell and J L Beeby* F1193

71.25M Electron energy states in amorphous and glassy solids

Formation energy of vacancies in disordered transitional alloys *J van der Rest, J Giner and F Gautier* F243
Magnetic properties of amorphous metallic alloys containing rare earth impurities *A K Bhattacharjee, R Jullien and M J Zuckermann* F393

71.25P Bandstructure of crystalline metals

Ultraviolet photoemission from single crystals and the bandstructure of gold *P Heimann and H Neddermeyer* FL37
An XPS investigation of the conduction band of Fe 8 at% Al *T Collins and P T Andrews* FL43
Electronic states of Pd–H alloys from de Haas–van Alphen measurements *R Griessen, W J Venema, J K Jacobs, F D Manchester and Y de Ribaupierre* FL133

Electronic structure of CsAu *A Hasegawa and M Watabe* F75
Electronic structure and optical properties of thallium *M A E A Ament and A R de Vroomen* F97
Energy bandstructure of zinc and cadmium *Parsathi Sinha and S Chatterjee* F105
Electron–impurity scattering in dilute alloys with lattice distortion: II. A model study *A Lodder* F139
Theory of energy bands and related properties of 4d transition metals: I. Band parameters and their volume dependence *D G Pettifor* F613
Bandstructure of thallium by the LMTO method *P M Holtham, J-P Jan and H L Skriver* F635
De Haas–van Alphen effect and the cut-off at small scattering angles *B R Watts* F929
Dingle temperature plots in dislocated metals: I *B R Watts* F939
Bandstructure and Fermi surface of Cu_2Sb by the LMTO method *J-P Jan and H L Skriver* F957
Hartree–Fock–Slater procedure for the calculation of optimised model potential parameters for aluminium *P J Bunyan* F1207
The de Haas–van Alphen effect and Fermi surface of gadolinium *P G Mattocks and R C Young* F1219
Self-consistent energy bands and Fermi surface of YZn *A Hasegawa and A Yanase* F1229
Energy bandstructure and Fermi surface of LaB_6 by a self-consistent APW method *A Hasegawa and A Yanase* F1245
Calculation of the bandstructure of aluminium using the model potential method *J A Nelson and P J Bunyan* F1467
High-precision measurements of the Fermi surface of aluminium *P T Coleridge and P M Holtham* F1891
A KKRZ calculation on indium: II. The Fermi surface as determined from radio-frequency size effect measurements *D G de Groot, A B M Hoff, D B B Rijsenbrij and J H P van Weeren* F2077
Systematics of the electron momentum distributions in some 3d transition metals *D G Kanhere and R M Singru* F2603

71.25T Bandstructure of crystalline semiconductor compounds and insulators

Electronic structure of intermetallic compounds with CsCl structure *D Seipler, B Bremicker, U Goebel, H Happel, H E Hoenig, B Perrin* F599

71.30 Metal-insulator transitions

One-dimensional Hubbard model with nearest and second nearest neighbour hopping in the Hartree–Fock approximation *E Marsch, W-H Steeb and D Grensing* F401

71.35 Excitons and related phenomena

New plasmon satellite in Kβ x ray emission from metallic titanium and chromium *B G Gokhale, S Rai and S D Rai* F299

71.38 Polarons and electron–phonon interactions

The effect of positron–phonon scattering on positron trapping at defects in metals: Formalism and low-order theory *T McMullen* F2041

71.50 Localised single-particle electronic states

Many-body effects in x ray photoemission from the noble metals *Y Yafet and G K Wertheim* F357
Parametrization of transition metal bandstructures via Hubbard's scheme *B Vasvári* F385
The coherent potential approximation for nonoverlapping muffin-tin potentials: paramagnetic Ni_xCu_{1-x} *G M Stocks, B L Gyorffy, E S Giuliano and R Ruggeri* F1859
New method for the Anderson model II: the $U = 0$ limit *S E Barnes* F2637

71.55 Impurity and defect levels

Positrons around vacancies in Al *G Mori* FL89
A note on the solubility and the heat of solution of impurities in BCC transition metals *K Terakura* FL287
TDPAC study of ^{111}Cd in Ag_xCd_y, Ag_xAl_y and Ag_xZn_y *S A Lis and R A Naumann* F293
Self-consistent screening of a proton in jellium *E Zaremba, L M Sander, H B Shore and J H Rose* F1763

71.65 Positron states

Temperature and pressure dependence of positron mean lives in cadmium *J D McGervey, P Sen, I K MacKenzie and T McMullen* FL255
On the temperature dependence of positron trapping in deformed copper *P Rice-Evans and Tin Hlaing* F821
On the effect of vacancy migration upon the annihilation of a trapped positron in metals *S W Tam and R W Siegel* F877(5)†
On the temperature dependence of positron annihilation in cadmium *L C Smedskjaer, M J Fluss, M K Chason, D G Legnini and R W Siegel* F1261
An investigation of positron annihilation in copper between 93 and 665 K *L C Smedskjaer, M J Fluss, D G Legnini, M K Chason and R W Siegel* F1715
The effect of positron–phonon scattering on positron trapping at defects in metals: Formalism and low-order theory *T McMullen* F2041

† Owing to a pagination error, references to papers whose page numbers are marked with a dagger should include the issue number in addition to volume and page numbers. This is given in parentheses.

71.90 Other topics in electron states
Determination of covalent electrons from x ray chemical shifts *P R Sarode and A R Chetal* F1103

72.00 ELECTRONIC TRANSPORT IN CONDENSED MATTER

72.10 Theory of electronic transport; scattering mechanisms
Effects of the energy dependence of the electron distribution function on electrical resistivities *K Takegahara and S Wang* FL293
A comparison of two theories of dislocation resistivity *R A Brown* FL297
Electron–impurity scattering in dilute alloys with lattice distortion: II. A model study *A Lodder* F139
Study of the audio-frequency magnetic field penetration in cadmium using the radio-frequency size effect *W M MacInnes, B Collet, P A Probst and R Huguenin* F655
Electronic structure of metals: III. Properties of the lattice and of electron transport *C B So, Y Kuroda, K Takegahara and S Wang* F885(6)†
Scattering theory for crystal dislocation *R A Brown* F1269
The anisotropy of electron–impurity scattering in potassium: I. Study using the de Haas–van Alphen effect *B Llewellyn, B McK Paul, D L Randles and M Springford* F2531
Anisotropy of scattering in potassium: II *B Llewellyn, D McK Paul, D L Randles and M Springford* F2545

72.15 Electronic conduction in metals and alloys
Deviation from Matthiessen's rule at high temperatures: Ag in Al *Y Fujita, Y Fukai and K Watanabe* FL175
Resistivity measurements on the intermetallic compound β'-$Ni_{48}Al_{52}$ with 3d transition metal impurities *Y Ochiai and J O Brittain* FL179
Thermoelectric power of the pure noble metals at low temperatures *A M Guénault and D G Hawksworth* FL219
Electrical resistivity of highly disordered metallic materials at high temperatures *R Harris, M Shalmon and M Zuckermann* FL259
Structural, electronic and magnetic properties of splat-quenched FeC_x alloys ($x \leqslant 0{\cdot}05$) *M C Cadeville, J M Friedt and C Lerner* F123
Effects of temperature on the order-dependent electrical resistivity *P L Rossiter* F407
Dependence of the electron scattering rate on lattice relaxation in dilute Al alloys *P G Tomlinson, J P Carbotte and G R Piercy* F1305

† Owing to a pagination error, references to papers whose page numbers are marked with a dagger should include the issue number in addition to volume and page numbers. This is given in parentheses.

The temperature dependence of the electromagnetic generation of ultrasound in tin below 20 K *R H Bidgood, M J Lea and E R Dobbs* F1791
Exact expressions for the surface impedance of a metal in a magnetic field *K Saermark* F2109
Surface impedance of a metal in a magnetic field and cyclotron waves; Numerical calculations *K Saermark, J Lebech and H Johansen* F2121

72.15C Electrical and thermal conduction in amorphous and liquid metals and alloys
Resistivity of $DyNi_3$ and $HoNi_3$ amorphous alloys *R Asomoza, A Fert, I A Campbell and R Meyer* FL325
Resistivity of liquid transition metals and their alloys using the t matrix *K Hirata, Y Waseda, A Jain and R Srivastava* F419
Electronic structure of metals: IV. Transport coefficients of simple liquid metals *S Wang and C B So* F1439
Temperature and magnetic field dependences of the resistivity of amorphous alloys *R W Cochrane and J O Strom-Olsen* F1799
On the temperature dependence of the electrical resistivity of amorphous metals *K Fröböse and J Jäckle* F2331

72.15E Electrical and thermal conduction in crystalline metals and alloys
The residual resistivities of dilute iron-based alloys in the two-current model *J W F Dorleijn and A R Miedema* FL23
Dislocation electrical resistivity and resonance scattering *R A Brown* FL95
The 'golden rule' for dislocation scattering *R A Brown* FL155
The lattice thermal conductivity of aluminium at low temperatures *T Amundsen, O Furuseth and R P Sovik* FL159
Deviation from Matthiessen's rule at high temperatures: Ag in Al *Y Fujita, Y Fukai and K Watanabe* FL175
The low-temperature electrical resistivity of bismuth *C A Kukkonen and K F Sohn* FL193
A comparison of two theories of dislocation resistivity *R A Brown* FL297
Electrical resistivity of Cd–Mg alloys: Effect of phonon local modes *J A Rowlands, B J Stackhouse and S B Woods* FL301
Resistivity anomalies in rare earth and transition metals and their alloys *L V Meisl and P-J Cole* FL321
First principles calculation of the electronic contribution to the thermal conductivity of potassium *C R Leavens* F163
Residual resistivities of 4d and 5d impurities in aluminium *T Toyoda, K Kume, H Ishikawa and Y Onodera* F303
High-temperature deviation from Matthiessen's rule in InCd alloys *R Fogelholm and Ö Rapp* F667

Low-temperature resistivity of ferromagnetic metals with domain structure *G G Cabrera* F827
Electrical resistivity of dislocations in metals *R A Brown* F1283
The effect of the energy dependence of the electron 'relaxation time' on the electrical resistivity of potassium *C R Leavens* F1297
A dislocation model of grain boundary electrical resistivity *R A Brown* F1477
A resistivity minimum in tungsten and its correlation with thermoelectric anomalies *C Uher, D C Mundinger and J Bass* F1691
Electric and magnetic properties of PtCr near the percolation limit *R M Roshko, I Maartense and G Williams* F1811
Spontaneous resistivity anisotropy in nickel–copper alloys *S N Kaul* F2091
The low-temperature thermopower of Frenkel defects in aluminium *G Sieber, G Wehr and K Böning* F2503
Calculations on electrical resistivity and thermoelectric power of nonsimple metals *S N Khanna and A Jain* F2523

72.15G Galvanomagnetic and other magnetotransport effects

On the normal Hall effect in nickel alloys *A R Miedema and J W F Dorleijn* FL27
Isotropic spin glass behaviour and transverse magnetoresistance in AuFe monocrystals *J E A Alderson, S P McAlister and C M Hurd* FL33
The true low-field Hall coefficient of high-purity silver and silver containing low-density defects at low temperatures *R D Barnard* F673
Magnetic breakdown in aluminium *W Kesternich and C Papastaikoudis* F837
Anisotropic temperature dependence of the Hall effect in monocrystalline copper *C M Hurd and S P McAlister* F969
The Hall effect in zinc *T C Genoni* F1867
Semiclassical theory of phonon-drag magnetothermoelectricity in metals *J L Opsal* F2349
Hall coefficients of liquid bismuth alloys *I Shiota and S Tamaki* F2361

72.15H Thermomagnetic effects

The magnetothermopower of molybdenum *R Fletcher, J L Opsal and B J Thaler* F1489

72.15J Thermoelectric effects

Thermoelectric power of the pure noble metals at low temperatures *A M Guénault and D G Hawkeworth* FL219
Thermoelectric power of homovalent noble metal alloys: II. Gold-based alloys *R H Dee and A M Guénault* F153

72.15L Relaxation times and mean free paths

Electron–impurity scattering in dilute alloys with lattice distortion: II. A model study *A Lodder* F139
The effect of the energy dependence of the electron 'relaxation time' on the electrical resistivity of potassium *C R Leavens* F1297
Anomalous behaviour of RFSE signals in tungsten *P E Beacock and A Myers* F2135

72.20 Conductivity phenomena in semiconductors and insulators

Semiconducting ytterbium at high temperatures *V Shubha, T G Ramesh and S Ramaseshan* F2367

72.30 High-frequency effects; plasma effects

New plasmon satellite in Kβ x ray emission from metallic titanium and chromium *B G Gokhale, S Rai and S D Rai* F299
Exact expressions for the surface impedance of a metal in a magnetic field *K Saermark* F2109

73.00 ELECTRONIC STRUCTURE AND ELECTRICAL PROPERTIES OF SURFACES, INTERFACES, AND THIN FILMS

Electronic structure of bulk and surface disordered alloys *M C Desjonquères and F Cyrot-Lackmann* F61

73.20 Electronic surface states

Coupling of electronically excited physisorbed atoms to metal substrates: Xe on Au and Ti *J E Cunningham, D Greenlaw, J L Erskine, R P Layton and C P Flynn* FL281
Comments on transition metal surface calculations *D G Dempsey and L Kleinman* F113
Interaction between metallic surfaces *R M Nieminen* F375
Theoretical analysis of (100) and (111) faces of copper *C Tejedor* F991
Electron binding energies of core levels in caesium adsorbed on a nickel (100) surface *N G Krishnan, W N Delgass and W D Robertson* F2623

73.40 Interfaces

Phonon absorption and pair breaking in superconductors at 35 GHz *B G M Helme, P A Hilton, D J Meredith and J K Wigmore* F427
Interface energy of two free-electron-like metals *J P Muscat and G Allan* F999

73.90 Other topics in electrical properties of surfaces, interfaces and thin films

Correlation effects in the cohesive properties of the transition metals *C M Sayers* F1157

74.00 SUPERCONDUCTIVITY

74.20 Theory

Theory of energy bands and related properties of 4d-transition metals: II. The electron–phonon matrix element, superconductivity and ion core enhancement *D G Pettifor* F1009

74.30 General properties
Grüneisen parameters, electron–phonon enhancement and superconductivity for Pd–H Alloys *T F Smith and G K White* F1029
74.50 Proximity effects, tunnelling phenomena, and Josephson effect
Kondo alloys and the superconductivity proximity effect *A B Kaiser* FL337
Important parameters in strong-coupling superconductivity *C R Leavens* F1911
74.60 Type II superconductivity
Flux flow in longitudinal geometry *D G Walmsley and W E Timms* F2373
74.70 Superconducting materials
Coexistence of superconductivity and spin glass magnetic freezing *D Davidov, K Baberschke, J A Mydosh and G J Nieuwenhuys* FL47
74.90 Other topics in superconductivity
Crystal field effects in normal and superconducting LaAg doped with Tb *H E Hoenig, C Lingner, G Binnig and J Keller* F1747

75.00 MAGNETIC PROPERTIES AND MATERIALS
75.10 General theory and models of magnetic ordering
Effect of finite core size on the RKKY interaction *J Smit* FL189
The effect of a finite ionic spin distribution on the RKKY interaction *M I Darby* FL191
On the ferromagnetic phase transition in Hubbard model *F Brouers and C M Chaves* FL233
Resistivity of $DyNi_3$ and $HoNi_3$ amorphous alloys *R Asomoza, A Fert, I A Campbell and R Meyer* FL323
Monte Carlo evidence for the absence of a phase transition in the two-dimensional Ising spin glass *A J Bray and M A Moore* FL333
Magnetism and magnetic excitations in narrow-band metals *A A Bahurmuz and M J Zuckermann* F1313
Gold–iron spin glasses in low DC fields: I. Susceptibility and thermoremanence *C N Guy* F1505
A model for the amorphous magnetism condition for ferromagnetic or spin glass transitions *M W Klein* F1699
Magnetocrystalline anisotropy: Beyond first-order perturbation theory *G J Bowden* F1731
Mixed state in antiferromagnetic chromium *R Griessen and E Fawcett* F2141
The elastic and magnetic properties of a single-crystal Gd–40%Y alloy *S B Palmer, D Hukin and C Işci* F2381
The critical concentration for the onset of ferromagnetism in CuNi alloys *J C Ododo and B R Coles* F2393
Improved itinerant-localised electron model for magnetism of transition metals *L Adamowicz* F2401
75.10D Crystal field theory and spin Hamiltonians
Exchange and Coulomb contributions to the CEI parameters in light rare earth cubic compounds *P Lethuillier, J Pierre and D K Ray* F175
Direct Coulomb contribution of the conduction electrons to the crystalline electric field in cubic rare earth intermetallics *D Schmitt* F1521
Crystal field effects in the ESR of gadolinium in polycrystalline cubic metallic compounds *P Urban and D Seipler* F1589
75.10H Ising and other classical spin models
Generalised mean field theory of spin glasses *W Kinzel and K H Fischer* F2163
75.10L Band and itinerant models
Stoner theory support for the two-state hypothesis for γ iron *D M Roy and D G Pettifor* FL183
Magnetic structures in the rare earth metals calculated using a simple non-spherical Fermi surface model *J A G Temple, W M Fairbairn and G R Pickett* F1039
The de Haas–van Alphen effect and Fermi surface of gadolinium *P G Mattocks and R C Young* F1219
Phase transition of chromium at T_N *E W Fenton and C R Leavens* F1705
Polarised neutron study of $HoCo_2$ *D Gignoux, F Givord and J Schweizer* F1823
A double d band model of transition metals: Magnetic susceptibility of exchange-enhanced paramagnets *J Zieliński* F1973
75.20 Diamagnetism and paramagnetism
Resistivity measurements on the intermetallic compound β'-$Ni_{48}Al_{52}$ with 3d transition metal impurities *Y Ochiai and J O Brittain* FL179
Local environment and magnetic properties in transitional binary alloys: III *J van der Rest* F1051
A theory of anomalies in the field dependence of the magnetization of strongly enhanced itinerant paramagnets *G Barnea and D M Edwards* F1323
Magnetic anisotropy in dysprosium *P B Fynbo* F1349
75.20E Metals and alloys
Stoner theory support for the two-state hypothesis for γ iron *D M Roy and D G Pettifor* FL183
Microscopic Fermi liquid theory of the temperature dependence of the susceptibility of normal paramagnetic metals *G Barnea* F315

A resonance study of the paramagnetic behaviour of Fe in Pd *R A B Devine* F461
Anisotropy of paramagnetostriction of metals with HCP structure *Y Takahashi and M Shimizu* F471
The distribution of magnetic moment in nickel alloys *T J Hicks* F481
Quadrupolar nuclear resonance investigation of the screening charge around 3d impurities in aluminium *C Berthier and M Minier* F515
On the magnetic ordering in palladium–manganese dilute alloys *G J Nieuwenhuys and B H Verbeek* F1497
Site selectivity and moment distribution in V and Cr substituted CoGa alloys *R Cywinski and J G Booth* F1531
Temperature dependence of the magnetocrystalline anisotropy energy of terbium in the basal plane *R R Birss, G J Keeler and C H Shepherd* F1669
Temperature dependence of the magnetocrystalline anisotropy energy of nickel in the (100) plane *R R Birss, G J Keeler and C H Shepherd* F1683
The structural phase transformation of $CeAg_xIn_{1-x}$ in the silver-rich concentration range *H Ihrig and W Lohmann* F1957
Neutron polarisation analysis of scattering from antiferromagnetic γ-MnCu and γ-MnPd *J R Davis and T J Hicks* F2153
New method for the Anderson model II: the $U = 0$ limit *S E Barnes* F2637

75.20H Local moments in dilute alloys; Kondo effect

Monte Carlo evidence for the absence of a phase transition in the two-dimensional Ising spin glass *A J Bray and M A Moore* FL333
Kondo alloys and the superconducting proximity effect *A B Kaiser* FL337
A functional-integral approach to the localised magnetic impurity problem *M Ahmed* F1543
Bulk and local magnetic susceptibilities of AuV Kondo alloys: Experiment in concentration-independent region *K Kume and K Mizoguchi* F1555
The magnetisation of the Kondo systems CuFe, AgFe, AuFe and MoFe *J G Pérez-Ramírez and P Steiner* F1573
Crystal field effects in normal and superconducting LaAg doped with Tb *H E Hoenig, C Lingner, G Binnig and J Keller* F1747
An estimate of the Kondo temperature of AgFe from susceptibility measurements *M Hanson* F2555
Hyperfine fields at sp sites in Heusler alloys *Le Dang Khoi, P Veillet and I A Campbell* F2561
New method for the Anderson model II: the $U = 0$ limit *S E Barnes* F2637

75.25 Spin arrangements in magnetically ordered materials (neutron studies, etc)

Isotropic spin glass behaviour and transverse magnetoresistance in AuFe monocrystals *J E A Alderson, S P McAlister and C M Hurd* FL33
A note on the hexagonal anisotropy of the fan phase in dysprosium *P B Fynbo* FL199
Dipolar anisotropy and the critical behaviour of spin glasses in small AC fields *F A de Rozario and D A Smith* F439
Magnetic structures in the rare earth metals calculated using a simple non-spherical Fermi surface model *J A G Temple, W M Fairbairn and G R Pickett* F1039
Inelastic scattering of polarised neutrons by ferromagnetic Pd_3Fe *T M Holden and W G Stirling* F1901
Generalised mean field theory of spin glasses *W Kinzel and K H Fischer* F2163
Magnetic excitations in Pd_3Fe *A J Smith, W G Stirling and T M Holden* F2411
Polarised neutron study of the concentration dependence of magnetic moment distribution in iron–vanadium alloys *P Radhakrishna, J Brown and F Kajzar* F2583
Small angle neutron scattering from superparamagnetic assemblies in binary CoGa alloys *R Cywinski, J G Booth and B D Rainford* F2567

75.30 Magnetically ordered materials, other intrinsic properties

Spin wave spectrum in ordered Pd_3Fe alloy *H Yamada and M Shimizu* FL203
Thermal expansion in the magnetically ordered phases of holmium *D A Tindall, M O Steinitz and M L Plumer* FL263
Magnetocrystalline anisotropy in RCo_2 compounds: A Mössbauer study *G Dublon and U Atzmony* F1069
Magnetic properties and structures of some ordered $(FeMn)_3Si$ alloys *S Yoon and J G Booth* F1079
Magnetism and magnetic excitations in narrow-band metals *A A Bahurmuz and M J Zuckermann* F1313
On the magnetic ordering in palladium–manganese dilute alloys *G J Nieuwenhuys and B H Verbeek*, F1497

75.30C Saturation moments and magnetic susceptibility

The formation of the magnetic moment of Co atom in pseudobinary alloys $CoTi_{1-x}Al_x$ in relation to a Heusler alloy Co_2TiAl *K Endo, I An and A Shinogi* FL99
Magnetic anisotropy in dysprosium *P B Fynbo* F1349

75.30D Spin waves

The preasymptotic form of the RKKY interaction in Heusler alloys *M I Darby* FL69

Spin wave spectrum in ordered Pd_3Fe alloy *H Yamada and M Shimizu* FL203
Influence of atomic ordering on the spin waves in $Ni_{0.75}Fe_{0.25}$ alloy *K Mikke, J Jankowska, Z Osetek and A Modrzejewski* FL211
Monte Carlo evidence for the absence of a phase transition in the two-dimensional Ising spin glass *A J Bray and M A Moore* FL333
Spin wave excitations in $Pd_{0.75}Ni_{0.25}$ *A J Smith and T M Holden* F849
Exchange interactions in dilute CrFe and CrCo alloys *F T Hedgcock, J O Strom-Olsen and D F Wilford* F855
Spin waves in HoZn *J Pierre, D Schmitt, P Morin and B Hennion* F1965
Improved itinerant-localised electron model for magnetism of transition metals *L Adamowicz* F2401

75.30E Exchange and superexchange interactions

Exchange and Coulomb contributions to the CEF parameters in light rare earth cubic compounds *P Lethuillier, J Pierre and D K Ray* F175
Spin waves in HoZn *J Pierre, D Schmitt, P Morin and B Hennion* F1965

75.30G Anisotropy

Low-field susceptibilities of rare earth spin glass alloys: The role of single-ion anisotropy *B V B Sarkissian* FL139
A note on the hexagonal anisotropy of the fan phase in dysprosium *P B Fynbo* FL199 (Corrigendum FL279)
The effect of nonmagnetic inclusions on the easy direction of gadolinium *R L Smith, B K Tanner and W D Corner* FL229
The random anisotropy model for amorphous metallic alloys: Generalized molecular field calculations *R Harris and D Zobin* F337
Magnetic anisotropy in dysprosium *P B Fynbo* F1349
Temperature dependence of the magnetocrystalline anisotropy energy of terbium in the basal plane *R R Birss, G J Keeler and C H Shepherd* F1669
Temperature dependence of the magnetocrystalline anisotropy energy of nickel in the (100) plane *R R Birss, G J Keeler and C H Shepherd* F1683
Magnetic properties of thulium *P B Fynbo* F2179

75.30H Magnetic impurity interactions

Crystal field effects in normal and superconducting LaAg doped with Tb *H E Hoenig, C Lingner, G Binnig and J Keller* F1747
Electric and magnetic properties of PtCr near the percolation limit *R M Roshko, I Maartense and G Williams* F1811
Generalised mean field theory of spin glasses *W Kinzel and K H Fischer* F2163
Hyperfine fields at Cd impurities in Pd_2MnY (Y = In, Sn, Sb) and PtMnY (Y = Sn, Sb) *B Lindgren, K Pernestål, S Bedi and E Karlsson* F2405

75.40 Critical point effects, specific heats, short-range order

Coexistence of superconductivity and spin glass magnetic freezing *D Davidov, K Baberschke, J A Mydosh and G J Nieuwenhuys* FL47
A novel low temperature rearrangement of atoms in the rare earth intermetallic compound $ErFe_3$ *G J Bowden and R K Day* F181
Longitudinal ultrasonic attenuation of single crystal erbium *P de V du Plessis and C Elbaum* F273
NMR study of magnetic transition in the $Cu_{1-x}Ni_x$ system *D Aliaga Guerra and P Panissod* F521
Magnetocrystalline anisotropy in RCo_2 compounds: A Mössbauer study *G Dublon and U Atzmony* F1069
Structural changes associated with antiferromagnetic ordering in Mn-rich Mn–Ni alloys *U Hocke and H Warlimont* F1145
Polarised neutron study of $HoCo_2$ *D Gignoux, F Givord and J Schweizer* F1823

75.50 Studies of specific magnetic materials

75.50B Ferromagnetism of Fe and its alloys

The residual resistivities of dilute iron-based alloys in the two-current model *J W F Dorleijn and A R Miedema* FL23
On the present understanding of the bulk modulus anomaly of invar alloys in the itinerant electron model of ferromagnetism *G Hausch* FL27
Stoner theory support for the two-state hypothesis for γ iron *D M Roy and D G Pettifor* FL183
A note on the hexagonal anisotropy of the fan phase in dysprosium *P B Fynbo* FL199 (Corrigendum FL279)

75.50C Ferromagnetism of other metals

On the normal Hall effect in nickel alloys *A E Miedema and J W F Dorleijn* FL27
The formation of the magnetic moment of Co atom in pseudobinary alloys $CoTi_{1-x}Al_x$ in relation to a Heusler alloy Co_2TiAl *K Endo, I An and A Shinogi* FL99
A note on the hexagonal anisotropy of the fan phase in dysprosium *P B Fynbo* FL199 (Corrigendum FL279)
Magnetic hyperfine fields at Au and Sb sites in the Heusler alloy AuMnSb *W Leiper, J D Rush, M F Thomas, C E Johnson, F W D Woodhams, C Blaauw and G R MacKay* F533
Electronic structure of intermetallic compounds with CsCl structure *D Seipler, B Bremicker, U Goebel, H Happel, H E Hoenig, B Perrin* F599

The hyperfine field of dilute scandium in ferromagnetic gadolinium *W D Brewer* F693
A study of Sn and Fe site hyperfine fields in ferromagnetic metals, including the Rh-based Heusler alloys *C C M Campbell, T Birchall and J C Suits* F727
Low-temperature resistivity of ferromagnetic metals with domain structure *G G Cabrera* F827
Temperature dependence of the magnetocrystalline anisotropy energy of nickel in the (100) plane *R R Birss, G J Keeler and C H Shepherd* F1683
Magnetic properties of thulium *P B Fynbo* F2179
The critical concentration for the onset of ferromagnetism in CuNi alloys *J C Ododo and B R Coles* F2393

75.50E Antiferromagnetics
Magnetic interactions and conduction electron polarisation studied by NMR in Heusler alloys *Le Dang Khoi, P Veillet and I A Campbell* FL237
Single crystal elastic constants of neodymium from 4·2 to 300 K *J T Lenkkeri and S B Palmer* F15
Charge and spin density in chromium–aluminium solid solutions *M M R Costa and P J Brown* F493
Magnetic anisotropy in dysprosium *P B Fynbo* F1349
The effect of palladium on the itinerant antiferromagnetism of chromium *K R A Ziebeck, R Chagnon and J G Booth* F1583
Mixed state in antiferromagnetic chromium *R Griessen and E Fawcett* F2141

75.50G Ferrimagnetics
The magnetic structure of $ErFe_3$ *R L Davis, R K Day and J B Dunlop* F1885
Magnetic properties of thulium *P B Fynbo* F2179

75.50K Amorphous magnetic materials
Magnetic measurements on amorphous FeSi alloys *G Marchal, Ph Mangin, M Piecuch, Chr Janot and J Hubsch* FL165
A new method to evaluate the free energy for random magnetic systems *M W Klein* FL267

75.60 Domain effects, magnetisation curves, and hysteresis
The random anisotropy model for amorphous metallic alloys: Generalized molecular field calculations *R Harris and D Zobin* F337
Low-temperature resistivity of ferromagnetic metals with domain structure *G G Cabrera* F827

75.80 Magnetomechanical and magnetoelectric effects, magnetostriction
Dipolar anisotropy and the critical behaviour of spin glasses in small AC FIELDS *F A de Rozario and D A Smith* F439

76.00 MAGNETIC RESONANCES AND RELAXATION IN CONDENSED MATTER; MOSSBAUER EFFECT

76.30 Electron spin resonance and relaxation
ESR of non S state ions in metallic Van Vleck pnictides *R Levin, D Davidov, C Rettori, J Suassuna and D Shatiel* F703
Relaxation phenomena and host exchange parameters in Tm van Vleck compounds *V Zevin, D Davidov, R Levin, D Shaltiel and K Baberschke* F2193

76.30D Ions and impurities: general
Crystal field effects in the ESR of gadolinium in polycrystailine cubic metallic compounds *P Urban and D Seipler* F1589

76.30P Conduction electrons
Influence of ion implantation on CESR in aluminium *A Stesmans, J van Meijel and J Witters* F199

76.50 Ferromagnetic, antiferromagnetic, and ferrimagnetic resonances; spin wave resonance
Ferromagnetic resonance linewidths of nickel single crystals *C J Gadsden and M Heath* FL273

76.60 Nuclear magnetic resonance and relaxation
A comment on the hyperfine field in ferromagnetic alloys *R A B Devine and Y Berthier* FL53
Hyperfine interactions and structural disorder of $Fe_3Si_{1-x}Al_x$ alloys *V Niculescu, K Raj, T Burch and J I Budnick* FL73
Magnetic interactions and conduction electron polarisation studied by NMR in Heusler alloys *Le Dang Khoi, P Veillet and I A Campbell* FL237
Structural, electronic and magnetic properties of splat-quenched FeC_x alloys ($x \leqslant 0{\cdot}05$) *M C Cadeville, J M Friedt and C Lerner* F123
NMR study of magnetic transition in the $Cu_{1-x}Ni_x$ system *D Aliaga Guerra and P Panissod* F521
Nuclear quadrupolar relaxation of Sb in liquid In–Sb alloys *M von Hartrott, K Nishiyama, J Rossbach, E Weihreter and D Quitmann* F713
The paramagnetic resonance of Gd in Laves phase di-aluminide compounds *E P Chock, R A B Devine, S A Dodds, R Orbach and L Tippie* F1097
Nuclear quadrupole relaxation in liquid metals and alloys *R L Havill, J Marsden and J M Titman* F2357
Spin adjustment in $(Gd,Dy)Al_2$ *P Miles, M A A Issa, K N R Taylor and G J Bowden* F2421
Concentration and temperature dependent nuclear relaxation in liquid In–Sn, Bi–Sn and In–Pb, Bi–Pb alloys *R Brandenburg, B Kokavecz and K Kramer* F2593

76.60C Chemical and Knight shifts
Electronic structure of intermetallic compounds with CsCl structure *D Seipler, B Bremicker, U Goebel, H Happel, H E Hoenig, B Perrin* F599

76.60G Quadrupole resonance
Experimental evidence of a screening charge anisotropy around several normal impurities in aluminium *M Minier and S Ho Dung* F503
Quadrupolar nuclear resonance investigation of the screening charge around 3d impurities in aluminium *C Berthier and M Minier* F515

76.80 Mossbauer effect; other gamma ray spectroscopy
Secondary defects in quenched aluminium studied by Mössbauer spectroscopy *Ch Janot and H Georges-Gibert* F231
Fast neutron radiation damage in aluminium studied by interstitial trapping at ^{57}Co Mössbauer atoms *W Mansel and G Vogl* F253
Magnetic hyperfine fields at Au and Sb sites in the Heusler alloy AuMnSb *W Leiper, J D Rush, M F Thomas, C E Johnson, F W D Woodhams, C Blaauw and G R MacKay* F533
A study of Sn and Fe site hyperfine fields in ferromagnetic metals, including the Rh-based Heusler alloys *C C M Campbell, T Birchall and J C Suits* F727
Magnetocrystalline anisotropy in RCo_2 compounds: A Mössbauer study *G Dublon and U Atzmony* F1069
The electric field gradient at tantalum in a hafnium single crystal subjected to hydrostatic and uniaxial compression *H Ernst, T Butz and A Vasquez* F1329
The influence of cation distribution on the quadrupole interaction in the Cd_xNi_{1-x} ferrite system *N A Eissa, A A Bahgat and M K Fzyek* F2209
Hyperfine fields at Cd impurities in Pd_2MnY (Y = In, Sn, Sb) and PtMnY (Y = Sn, Sb) *B Lindgren, K Pernestål, S Bedi and E Karlsson* F2405

78.00 OPTICAL PROPERTIES AND CONDENSED MATTER SPECTROSCOPY AND OTHER INTERACTIONS OF MATTER WITH PARTICLES AND RADIATION

78.20 Optical properties and materials
The optical surface modes of metal spheres *A D Boardman and B V Paranjape* F1935
Electronic structure and optical properties of thallium *M A E A Ament and A R de Vroomen* F97
Optical studies of dilute CuNi alloys *D Beaglehole and C Kunz* F1923
Optical constants of gadolinium at various temperatures from polarimetric measurements *J P Petrakian, N Ahmed Mokhtar and R Fraisse* F2431

78.20D Optical constants and parameters
The optical density of states of liquid gallium *C Norris and J T M Wotherspoon* F1599
Temperature dependence of optical properties of Ta–W–Re alloys *B U Habedank, L K Thomas and S Thurm* F2217

78.20L Magneto-optical effects
Magnetoreflection of arsenic for circularly polarised radiation *M G Priestley and M H B Thomas* F2225

78.65 Optical properties of thin films
Coupling of electronically excited physisorbed atoms to metal substrates: Xe on Au and Ti *J E Cunningham, D Greenlaw, J L Erskine, R P Layton and C P Flynn* FL281
Optical properties of gallium films between 2 and 15 eV *G Jezequel, J C Lemonnier and J Thomas* F1613
Optical properties for white tin films between 2 and 15 eV *G Jezequel, J C Lemonnier and J Thomas* F2613

78.70 Other interactions of matter with particles and radiation
XPS valence bands of La, Ce and Gd and their aluminium alloys *P Steiner, H Höchst and S Hüfner* FL145

78.70D X ray absorption and absorption edges
EXAFS of Cu obtained with a conventional x ray source *J A del Cueto and N J Shevchik* FL215
X ray chemical shifts and atomic charges *P R Sarode and A R Chetal* F745
Determination of covalent electrons from x ray chemical shifts *P R Sarode and A R Chetal* F1103
Fine structure in the K absorption edge of rubidium *B K Agarwal and R K Johri* F1607
X ray L_1, L_2 and L_3 absorption limits of Mo *S Kawata and K Maeda* F2243

78.70E X ray emission threshold and fluorescence
On the soft x ray emission from Fe–Al alloys *C M Sayers, N H March, L M Watson and D J Fabian* FL77
New plasmon satellite in Kβ x ray emission from metallic titanium and chromium *B G Gokhale, S Rai and S D Rai* F299
XPS d bands and core levels of Pt–Ni alloys *N J Shevchik and D Bloch* F543
On temperature broadening in x ray spectra of metals *L Hedin and A Rosengren* F1339
Atomic M lines of metallic plutonium *G Lacheré* F2451

79.00 ELECTRON AND ION EMISSION BY LIQUIDS AND SOLIDS; IMPACT PHENOMENA

79.20 Impact phenomena

Double ionization satellites in x ray excited L Auger spectra of solid Mg *J C Fuggle* FL81

79.60 Photoemission and photoelectron spectra

Ultraviolet photoemission from single crystals and the bandstructure of gold *P Heimann and H Neddermeyer* FL37

An XPS investigation of the conduction band of Fe 8 at% Al *T Collins and P T Andrews* FL43

Electronic states of Mn, Fe, Co, Ni, and Cu impurities in aluminium *P Steiner, H Höchst and S Hüfner* FL105

X ray photoelectron studies of scandium and its hydride and oxide *J K Gimzewski, D J Fabian, L M Watson and S Affrossman* FL305

X ray photoemission investigation of the density of states of simple metals *H Hochst, P Steiner and S Hüfner* FL309

Excitation of Fe 1s core-level photoelectrons with synchrotron radiation *D J Fabian, J Gimzewski, A Barrie and B Dev* FL343

Ultraviolet photoelectron spectroscopy of the valence bands of some Ag alloys *J A Nicholson, J D Riley, R C G Leckey, J Liesegang and J G Jenkin* F351

Many-body effects in x ray photoemission from the noble metals *Y Yafet and G K Wertheim* F357

On temperature broadening in x ray spectra of metals *L Hedin and A Rosengren* F1339

Ultraviolet photoemission studies of thallium *J H P Castelijns and A R de Vroomen* F1947

UPS spectra for Cu in the range 14–45 eV *G P Williams, C Norris and M R Howells* F2247

On the quantitative evaluation of XPS lineshape asymmetries for free-electron-like metals *P Minnhagen* F2441

Ultraviolet photoemission properties of metallic tin *J H P Castelijns, H W J M aan de Brugh and A R de Vroomen* F2457

Electron binding energies of core levels in caesium adsorbed on a nickel (100) surface *N G Krishnan, W N Delgass and W D Robertson* F2623

80.00 CROSS-DISCIPLINARY PHYSICS AND RELATED AREAS OF SCIENCE AND TECHNOLOGY

81.00 MATERIALS SCIENCE

81.10 Methods of crystal growth and purification

81.10J Growth from solid phases

The effects of ion-implanted impurities on the anodic oxidation of titanium *G H Gleaves, G Dearnaley and R A Collins* F2031

81.30 Phase diagrams and microstructures developed by solidification and solid–solid transformations

Occurrence of the sigma phase computed from a cluster model *M Brauwers* F921

81.30B Phase diagrams of metals and alloys

Electronic states of Pd–H alloys from de Haas–van Alphen measurements *R Griessen, W J Venema, J K Jacobs, F D Manchester and Y de Ribaupierre* FL133

Comments on the effect of impurities on the structural stabilisation of iron-rich binary alloys *C Demangeat and F Gautier* F1435

81.70 Materials testing

Neutron radiographic measurement of the diffusion of H in β-Ti, V, Nb and Ta *A Zeilinger and W A Pochman* F575

europhysics journals

The Europhysics Journal symbol indicates that a physics journal, published in Europe, has been recognized by the European Physical Society as being of high standard and international significance. *Reports on Progress in Physics* and the *Journals of Physics A–G* have been granted the status of Europhysics Journals.

The Journals of Physics

Journal of Physics A :
Mathematical and General

Journal of Physics B :
Atomic and Molecular Physics

Journal of Physics C :
Solid State Physics

Journal of Physics D :
Applied Physics

Journal of Physics E :
Scientific Instruments

Journal of Physics F :
Metal Physics

Journal of Physics G :
Nuclear Physics

Seven international research journals for the publication of original papers, letters and, occasionally, short specialist review articles.

Reports on Progress in Physics

A long established journal for the publication of reviews on all branches of physics.

Combined subscription rate

Libraries wishing to maintain a comprehensive physics coverage may save money by taking advantage of a combined subscription rate for the seven *Journals of Physics A–G* and the complementary review journal *Reports on Progress in Physics.*

Further information is available from

The Institute of Physics

Techno House, Redcliffe Way, Bristol BS1 6NX, England

PROFESSIONAL MAGAZINES

Three magazines meeting the professional needs of individual physicists for an overall awareness of current activity in physics. *Physics Bulletin, Physics Education* and *Physics in Technology* keep their readers up to date with developments in physics and related disciplines, involved with professional affairs, aware of science policy issues, and informed about important events. They supplement the more technical literature and are designed with the general interests of a wide readership in mind.

Combined subscription rate

While *Physics Bulletin* covers the whole spectrum of physics, *Physics Education* is more concerned with the teaching of physics and *Physics in Technology* with its applications. The three magazines complement each other in covering the professional interests of physicists, and are therefore offered jointly on a combined subscription to encourage their wider availability in libraries and institutions. This gives both convenience of ordering and a financial saving.

1977 volumes
USA, Canada and Mexico $125.00 (air freighted)
Australia, New Zealand and Japan £50.00 (air speeded)
UK and all other countries £45.00

England

Physics Bulletin

A monthly news magazine of interest to all physicists. It reviews developments in physics and related fields, and gives prominent coverage to current professional and scientific affairs, particularly in Britain and continental Europe.

Volume 28 1977 12 issues
USA, Canada and Mexico $50.00 (air freighted)
Australia, New Zealand and Japan £20.00 (air speeded)
UK and all other countries £18.00

Physics in Technology

A Europhysics Journal

An interdisciplinary magazine for all scientists, engineers and students interested in the applications of physics to current technology. It stresses the strong links between technological advances and physics research. The magazine is well illustrated with a minimal use of mathematics, and aims at an informal style of presentation.

Volume 8 1977 6 issues
USA, Canada and Mexico $45.00 (air freighted)
Australia, New Zealand and Japan £22.00 (air speeded)
UK and all other countries £20.00

Physics Education

A magazine of immediate and practical value to teachers of physics in schools, colleges, polytechnics and universities. It provides reliable treatments of difficult subjects and clear explanations of new and established concepts in physics, and is regarded as a major medium for the exchange of ideas on physics teaching.

Volume 12 1977 7 issues
USA, Canada and Mexico $40.00 (air freighted)
Australia, New Zealand and Japan £16.00 (air speeded)
UK and all other countries £14.00

Physics books from Adam Hilger Ltd

Plasmas and Laser Light
T P Hughes

The interaction of intense laser radiation with plasma is a topical subject, mainly because of its relevance to research on the release of controlled nuclear energy. Disciplines ranging from gas dynamics to geophysics contribute to this rapidly expanding subject, and this book should prove useful both to experts in, and those newly entering, the fields of plasma physics, laser applications, spectroscopy, controlled thermonuclear fusion, nonlinear optics, and the subsidiary field of astrophysics.

'The value of putting together systematically such a variety of phenomena and offering a starting point and a guiding line through the vast and scattered literature is enormous.'
Physicalia

1975 448 pages over 400 illustrations
248mm × 172mm 0 85274 086 7
£33.00 net

High-Speed Silicon Planar–Epitaxial Switching Diodes
M Kocsis

Planar–epitaxial diodes are important as high-speed switches in semiconductor circuitry. This book covers previously neglected areas of their theory and the dependence of operating performance on detailed physical constitution. For electronic engineers and device physicists involved in the design, manufacture and application of semiconductor devices and circuitry.

1976 176 pages 98 illustrations
230mm × 153mm 0 85274 206 1
£10.00 net

Magnetohydrodynamics
T G Cowling

A book dealing primarily with the fundamental ideas and principal phenomena of the subject, drawing its examples mainly from problems of the earth's core and extreme outer atmosphere, the sun's magnetic field and interplanetary and interstellar plasmas. The treatment is mathematical but emphasizes the physical significance of the equations. For physicists and mathematicians working in astronomy, planetary science, space physics, thermonuclear and plasma research.

'No third-year undergraduate or research worker interested in this field should be without this comprehensive but short and excellently produced book'
British Book News

1976 x + 136 pages illustrated
251mm × 157mm 0 85274 300 9
£10.00 net

Dielectric Spectroscopy of Polymers
P Hedvig

Dielectric spectroscopy is proving useful in testing solid polymeric materials as it yields information about mechanical as well as electrical characteristics. This text reviews basic theory, techniques and main results.

1977 384 pages 180 illustrations

The Harvest of a Quiet Eye

A Selection of Scientific Quotations

Collected by Alan L Mackay
(Birkbeck College, University of London)
Edited by Maurice Ebison
with a Foreword by Sir Peter Medawar

The words of great men have much to offer the scientifically minded reader, whether seriously thought-provoking or basically humorous. This book is based on a personal collection of such quotations, by the famous and not so famous, amassed over the years by Dr Alan Mackay. It is not intended as a mere dictionary of quotations but as a unique reflection of Dr Mackay's keen interest in all aspects of life, with the recurring theme of science running throughout. The quotations are drawn from scientists and philosophers, writers and poets, clerics and politicians, of all periods and nationalities, with the inclusion of proverbs, graffiti and other multifarious items to enhance the special appeal of the book. There are over 1200 entries, presented in alphabetical order of their attribution, and a keyword index is included, thus enabling the reader to relocate any half-remembered item.

1977 xii + 192 pages 24 line illustrations

He uses statistics as a drunken man uses lamp-posts —for support rather than illumination
Andrew Lang

A Random Walk in Science

Compiled by R L Weber
(Pennsylvania State University)
Edited by E Mendoza
(Hebrew University, Jerusalem)

A collection of writings by and about scientists, this highly acclaimed book provides an insight into the wit and intellect of the scientific mind through items both amusing and serious. In his Foreword, novelist William Cooper has captured the spirit of the book with the observation that 'clever men are fun . . . that's not necessarily to say funny; though some of the contributions are very funny'. Despite the humorous items, this anthology has its more serious side: the contents illustrate the ambitions, frustrations and elations of scientists, their changing attitudes and their interaction with society.

1973 xviii + 206 pages line illustrations and 12 plates
